## Summary

The Child Support Enforcement (CSE) program was enacted in 1975 as a federal-state program. Its mission is to enhance the well-being of children by helping custodial parents and children obtain financial support from the noncustodial parents. Although states were always required to provide CSE services to members of Indian tribes and tribal organizations who were part of their CSE caseloads, tribes were not specifically included in the CSE statute until the 1996 welfare reform law (P.L. 104-193). The 1996 law allowed any state that has Indian country within its borders to enter into a cooperative agreement with an Indian tribe if the tribe demonstrated that it had an established tribal court system with the authority to establish paternity, and establish, modify, and enforce child support orders. In addition, P.L. 104-193 gave the Secretary of the Department of Health and Human Services (HHS) the authority to make direct payments to Indian tribes that have approved CSE programs.

There are currently 55 tribal CSE programs (38 comprehensive tribal CSE programs and 17 start-up tribal CSE programs). In contrast to the federal matching rate of 66% for CSE programs run by the states or territories, the tribal CSE program provides direct federal funding equal to 100% of approved and allowable CSE expenditures during the start-up period, provides 90% federal funding for approved CSE programs operated by tribes or tribal organizations during the first three years of full program operation, and provides 80% federal funding thereafter. In FY2010, the 38 tribes or tribal organizations with comprehensive tribal CSE programs had an aggregate of 38,642 cases and collected over \$27 million in total child support collections.

Tribal CSE program services include parent location, paternity establishment, establishment of child support orders, review and modification of child support orders, enforcement/collection of child support payments, and distribution of child support. Indian tribes and tribal organizations that choose to operate a tribal CSE program must run programs that conform to the objectives of the state CSE program and that are in compliance with the tribal CSE program regulations. However, federal regulations provide some flexibility that allows tribes and tribal organizations to develop and administer tribal CSE programs that are consistent with the tribe's law and tradition.

In 2010, about 52% of the nearly 1 million American Indian and Alaska Native children were living with only one of their parents. In 2010, about 66% of American Indian and Alaska Native children were born to unmarried women. Given that only 55 of the 564 federally recognized tribes are operating comprehensive or start-up tribal CSE programs, these statistics suggest that many Native American children are without adequate CSE services and may not be getting the child support to which they are entitled. This report presents some demographic data on the number of Native Americans living in the United States and also provides statistical data on tribal CSE programs. Although the data are useful in developing an understanding of tribal CSE programs, they should not be used to draw conclusions regarding the effectiveness of tribal CSE programs.

This report describes the components of tribal CSE programs and discusses issues related to jurisdictional matters, paternity establishment, child support enforcement methods, nonpayment problems, and consistency of tribal programs with each other and with state CSE programs. The report also includes three appendices. **Appendix A** includes six tables that arrange each tribe according to its ranking in FY2010 on several CSE program indicators. **Appendix B** displays FY2010 information that shows the 38 comprehensive tribal CSE programs. It also shows the 17 start-up tribal CSE programs. **Appendix C** shows the American Indian and Alaska Native household population for 2005 for tribes with CSE programs.

## Introduction

Child support is the cash payment that a noncustodial parent is obligated to pay for the financial support of his or her children. All 50 states, the District of Columbia, Guam, Puerto Rico, and the U.S. Virgin Islands operate Child Support Enforcement (CSE) programs. Historically, states were required to provide CSE services to members of Indian tribes and tribal organizations who were part of their CSE caseloads. Although tribes were not specifically included in the CSE statute until the 1996 welfare reform law, several tribes had negotiated agreements (e.g., informal, cooperative, intergovernmental, and joint powers) with some states in a mutual effort to serve Native American<sup>1</sup> children. The 1996 welfare reform law (P.L. 104-193) allowed direct federal funding of approved tribal CSE programs.<sup>2</sup>

As of August 2, 2012, there were 55 tribal CSE programs.<sup>3</sup> (See **Table B-1** and **Table B-2**.) The Indian tribes or tribal organizations with tribal CSE programs are listed in the text box on the next page and are shown on the map in **Figure 1**. The 38 tribes or tribal organizations with comprehensive CSE programs distributed over \$27 million in total child support collections in FY2010 to 38,642 cases in the CSE tribal program.

Only federally recognized tribes and tribal organizations are eligible to operate tribal CSE programs. As of October 1, 2010, there are 564 federally recognized Indian tribes.<sup>4</sup> Although tribal CSE programs do not have to have a court system per se, they are required to have either a judicial or administrative system to hear, establish, and enforce child support orders.<sup>5</sup> Moreover, tribal CSE programs are required to ensure that the due process rights of participants are protected. According to the federal Office of Child Support Enforcement (OCSE) in the U.S. Department of Health and Human Services (HHS), it may be necessary to make adjustments to an existing court system or to develop an administrative process under a start-up tribal CSE program.<sup>6</sup> However, according to OCSE, when a tribe applies for funding to operate a comprehensive tribal CSE program,<sup>7</sup> it must demonstrate that the judicial or administrative

---

<sup>1</sup> In this report, the terms “Native American,” “Indian,” and “AIAN” will be used interchangeably. They all mean American Indians and Alaska Natives (“Alaska Natives” includes the American Indians, Eskimos (Inuit and Yupik), and Aleuts of Alaska).

<sup>2</sup> Federal regulations that were published in their final form in 2004, rather than the federal law, specified the level of federal funding. Pursuant to title 45 Code of Federal Regulation (C.F.R.) section 309.130(c), 100% federal funding is available for tribal CSE programs during the start-up period, 90% federal funding during the first three years that the program is fully operational, and 80% federal funding thereafter.

<sup>3</sup> U.S. Department of Health and Human Services, Office of Child Support Enforcement, List of Tribal CSE Programs, <https://ocse.acf.hhs.gov/int/directories/index.cfm?fuseaction=main.tribalivd>.

<sup>4</sup> *Federal Register*, vol. 75, no. 190, October 1, 2010, p. 60810; see <http://frwebgate6.access.gpo.gov/cgi-bin/PDFgate.cgi?WAISdocID=598663376018+2+2+0&WAIAction=retrieve>.

<sup>5</sup> About 275 federally recognized tribes have tribal courts and 23 have Courts of Indian Offenses, according to the National Tribal Justice Resource Center of the National American Indian Court Judges Association. Tribal courts vary widely with respect to the types of cases heard, and the law applied in each is distinctly unique to each tribe. Some tribal courts resemble Western-style courts where written laws and rules of court procedure are applied. However, an increasing number of tribes are returning to their traditional means of resolving disputes through the use of peacemaking, elders’ councils, and sentencing circles; <http://www.tribalresourcecenter.org/tribalcourts/history.asp>.

<sup>6</sup> In FY2010, there were 7 start-up tribal CSE programs. A start-up tribal program does not have to have all of the 14 CSE program components mandated by federal regulations.

<sup>7</sup> In FY2010, there were 38 comprehensive tribal CSE programs. A tribal program is considered comprehensive if it has all of the 14 program components stipulated in the federal tribal CSE regulations.

process is sufficient to establish and enforce child support orders. Thus, the universe of tribes that are potentially eligible to operate a tribal CSE program may not be as high as 564 because the tribe must have a court system (which about 298 tribes have) or an administrative system. The number of potentially eligible tribes is further reduced because tribes must have at least 100 children under their jurisdiction, and many tribes do not meet this requirement.

\* Denotes start-up programs (Source: <https://ocse.acf.hhs.gov/int/directories/index.cfm?fuseaction=main.tribalivd>)

Because sufficient demographic and social statistics on Indian tribal members are not collected by federal or other entities, it is difficult to estimate how many children under tribal jurisdiction are *not* covered by tribal CSE programs. Most estimates are derived from Census counts, which are based on race, not tribal membership. (See the discussion under “Data” below.) One estimate based on Census racial data found that, in 2010, about 52% of the 650,377 American Indian and Alaska Native children (i.e., roughly 338,000 children) were living with only one of their parents.<sup>8</sup> In 2010, about 66% of American Indian and Alaska Native children were born to

unmarried women (again, according to race).<sup>9</sup> Given that only 55 tribes<sup>10</sup> are operating comprehensive or start-up tribal CSE programs, these statistics, even though they are based on race and not tribal membership, suggest that many Native American children may be without CSE services and therefore may not be getting the child support to which they are entitled.

This report provides a brief legislative history of CSE provisions related to tribes, presents basic information on tribal CSE programs, describes the information that tribal CSE programs must contain in order to be approved for federal funding, displays data on current tribal CSE programs, and discusses issues related to ensuring that Native American children receive the child support to which they are entitled. The report also includes three appendices. **Appendix A** includes six tables that arrange each tribe according to its ranking in FY2010 on several CSE program features or indicators. **Appendix B** displays FY2010 information that shows the 38 comprehensive tribal CSE programs. It also names the 17 start-up tribal CSE programs. **Appendix C** shows estimates of total population for each tribe that operates a tribal CSE program.

## Background

The CSE program was enacted in 1975 as a federal-state program (Title IV-D of the Social Security Act) to help strengthen families by securing financial support for children from their noncustodial parent on a consistent and continuing basis and by helping some families to remain self-sufficient and off public assistance. The mission of the CSE program has shifted and expanded over the years. It has evolved from being a program primarily focused on welfare cost recovery to a program that focuses more on enhancing the well-being of children by obtaining child support from noncustodial parents and by emphasizing the personal responsibility of both parents to their children. Child support payments enable parents who do not live with their children to fulfill their financial responsibility to their children by contributing to the payment of childrearing costs.

---

<sup>8</sup> In 2010, the comparable percentages of children living in one-parent households for other groups were as follows: 16% of Asian American and Pacific Islander children, 24% of white children, 41% of Hispanic children, and 66% of black children. (Source: Annie E. Casey Foundation, Kids Count Data Center, Data for 2010, <http://datacenter.kidscount.org/data/acrossstates/Rankings.aspx?ind=107>)

<sup>9</sup> U.S. Department of Health and Human Services, National Center for Health Statistics, “Births: Preliminary Data for 2010,” by Brady E. Hamilton, Joyce A. Martin, and Stephanie J. Ventura, *National Vital Statistics Reports*, vol. 60, no. 2, November 2011, Table 1.

<sup>10</sup> The 38 tribes with comprehensive CSE programs served about 39,000 cases in FY2010. A CSE case may include more than one child. OCSE defines a CSE “case” as a noncustodial parent (mother, father, or putative/alleged father) who is now or eventually may be obligated under law for the support of a child or children receiving services under the CSE program. If the noncustodial parent owes support for two children by different women, that would be considered two cases; if both children have the same mother, that would be considered one case.

The CSE program currently provides seven major services on behalf of children: (1) parent location, (2) paternity establishment, (3) establishment of child support orders, (4) review and modification of child support orders, (5) enforcement/collection of child support payments, (6) distribution of child support payments, and (7) establishment and enforcement of medical support. The CSE program serves both families that receive Temporary Assistance for Needy Families (TANF) benefits and those who do not. All 50 states and four jurisdictions (the District of Columbia, Guam, Puerto Rico, and the U.S. Virgin Islands) operate CSE programs. In addition, 55 tribes or tribal organizations have CSE programs. The CSE program is administered by the federal Office of Child Support Enforcement (OCSE), which is in the Administration for Children and Families (ACF) within the Department of Health and Human Services (HHS).

In the early days of child support enforcement, states were required to cooperate in interstate CSE cases, but problems arose stemming from the autonomy of local courts. Family law traditionally had been under the jurisdiction of state and local governments, and citizens fell under the jurisdiction of the courts where they lived. Thus, when parents lived in different states, conflicts arose with regard to which state's rules applied to the case in question. During the 1930s and 1940s, domestic/family law under the jurisdiction of state and local courts was used to establish and enforce child support obligations when the noncustodial parent, custodial parent, and child lived in the same state. But when noncustodial parents lived out of state, enforcing child support was cumbersome and ineffective. Often, the only option in those cases was to extradite the noncustodial parent and, when successful, jail the person for nonpayment of child support. This procedure, which was rarely used, generally punished the delinquent noncustodial parent, but it left the abandoned family without financial support. Even up until the late 1990s, many commentators and CSE staff said that interstate cases were the most difficult child support orders to enforce. Others, however, noted that when a child support case involved a Native American child, the case moved to another level of complexity.

Before enactment of the 1996 welfare reform law (P.L. 104-193), the CSE statute placed the authority to administer the delivery of CSE services solely with the states.<sup>11</sup> However, within much of Indian country, the authority of state and local governments was very limited or nonexistent. Thus, states were limited in their ability to provide CSE services on tribal lands and, vice versa, Indian families had difficulty obtaining CSE services from the state CSE programs.<sup>12</sup> Pursuant to the Constitution, numerous court decisions, and federal law, Indian tribes have the authority to make and enforce laws, to adjudicate civil and criminal disputes (including domestic relations cases), to tax, and to license, regarding members and other Indians within their jurisdictions. State power is limited unless Congress has authorized it. Therefore, prior to the 1996 welfare reform legislation, states that attempted to provide CSE services on tribal lands were restricted in their authority to establish paternity and to establish and enforce child support orders. During the pre-1996 period, cooperative agreements between Indian tribes and states were

---

<sup>11</sup> At state option, CSE services can be administered by local units of government. In most of the states (29 states and the District of Columbia), the CSE program is state administered with offices in many local areas. However, 14 states have programs that are locally (i.e., county) administered; and eight states have programs that are state administered in some counties and locally administered in others (two of these states indicated that they also use private contractors). (Source: OCSE, Intergovernmental Referral Guide, Section A1 for each of the states, January 2008, <http://ocse.acf.hhs.gov/ext/irg/sps/selectastate.cfm>.)

<sup>12</sup> *Federal Register*, vol. 69, no. 61, March 30, 2004, Tribal Child Support Enforcement Programs, preamble of final rule, p. 16638.

the primary method by which Indian children (especially those living on reservations) received CSE services.<sup>13</sup>

## **CSE Provisions Related to Indian Tribes and Tribal Organizations**

This section describes federal laws relating to child support that specifically mention Indian tribes and tribal organizations.

In 1994, P.L. 103-383 (the Federal Full Faith and Credit for Child Support Orders Act) was enacted. Section 3(a) of the 1994 act required a state to recognize and enforce another state's child support order. "State" is defined as "a state of the United States, the District of Columbia, the Commonwealth of Puerto Rico, the territories and possessions of the United States, and Indian country (as defined in Section 1151 of Title 18 of the U.S. Code)."<sup>14</sup> Therefore, states and tribes are required to recognize and enforce valid tribal child support orders, without regard to whether such orders were issued by a state or tribal court or agency.

In 1996, P.L. 104-193 (the Personal Responsibility and Work Opportunity Reconciliation Act of 1996) included two CSE provisions pertaining to Indian tribes. First, it allowed states to enter into cooperative agreements with Indian tribes and tribal organizations,<sup>15</sup> and second, it authorized the HHS Secretary to provide direct federal funding to Indian tribes. The 1996 law allowed any state that has Indian country (as defined in 18 U.S.C. 1151) within its borders to enter into a cooperative agreement with an Indian tribe or tribal organization if the tribe demonstrated that it had an established tribal court system with the authority to establish paternity, and establish, modify, and enforce child support orders.<sup>16</sup> In addition, P.L. 104-193 gave the HHS Secretary the

---

<sup>13</sup> Office of Child Support Enforcement, Action Transmittal OCSE-AT-98-21, "Implementing Section 454(33) of the Social Security Act, Cooperative Agreements Between Indian Tribes and State Agencies Operating a State Child Support Enforcement Program Under Title IV-D of the Act," July 28, 1998, p. 1.

<sup>14</sup> 28 U.S.C. 1738B(b). "Indian country" is defined in 18 U.S.C. 1151 as "(a) all land within the limits of any Indian reservation under the jurisdiction of the United States Government, notwithstanding the issuance of any patent, and, including rights-of-way running through the reservation, (b) all dependent Indian communities within the borders of the United States whether within the original or subsequently acquired territory thereof, and whether within or without the limits of a state, and (c) all Indian allotments, the Indian titles to which have not been extinguished, including rights-of-way running through the same."

<sup>15</sup> Prior to the 1996 law, CSE state plan requirements only included provisions for states to cooperate with other states in interstate CSE cases. Moreover, because states generally did not have jurisdiction on Indian reservations, a tribe would enter into an agreement with the state to recognize the state (or county) jurisdiction on tribal lands for the sole purpose of child support enforcement. In such agreements, the tribe generally allowed the CSE agency to extend CSE procedures to the reservation. If under such agreement the CSE agency requested the tribe to carry out a child support enforcement activity, the tribe had to perform the child support enforcement function in accordance with federal CSE regulations. The 1996 law modified the federal CSE law that required states to cooperate with other states to also include cooperation with all tribal CSE programs. Further, under the 1996 law, a cooperative agreement with a tribal entity does not require that tribal law conform with federal CSE regulations in order for the state to receive federal CSE matching funds for the CSE services provided to the family (i.e., the tribe would receive the payment specified in the cooperative agreement and the state or locality would be entitled to federal matching funds for CSE expenditures made pursuant to the agreement). See Office of Child Support Enforcement, "Implementing section 454(33) of the Social Security Act, Cooperative Agreements Between Indian Tribes and State Agencies Operating a State Child Support Enforcement Program Under Title IV-D of the Act," OCSE-AT-98-21, July 28, 1998.

<sup>16</sup> 42 U.S.C. 654(33). This provision defines tribes and tribal organizations in accordance with § 4 of the Indian Self-Determination and Education Assistance Act (P.L. 93-638, as amended), which defines "Indian tribe" as a federally recognized tribe or an Alaska Native regional or village corporation, and defines "tribal organization" as a tribal government, an organization established by a tribal government, or a community organization established by tribal members (25 U.S.C. 450b(e), (l)).

authority to make direct payments to Indian tribes that have approved CSE programs. In contrast to the federal matching rate of 66% for CSE programs run by the states or territories, the CSE program provides direct federal funding equal to 100% of approved and allowable CSE expenditures during the start-up period, provides 90% federal funding for approved CSE programs operated by tribes or tribal organizations during the first three years of full program operation, and provides 80% federal funding thereafter.<sup>17</sup>

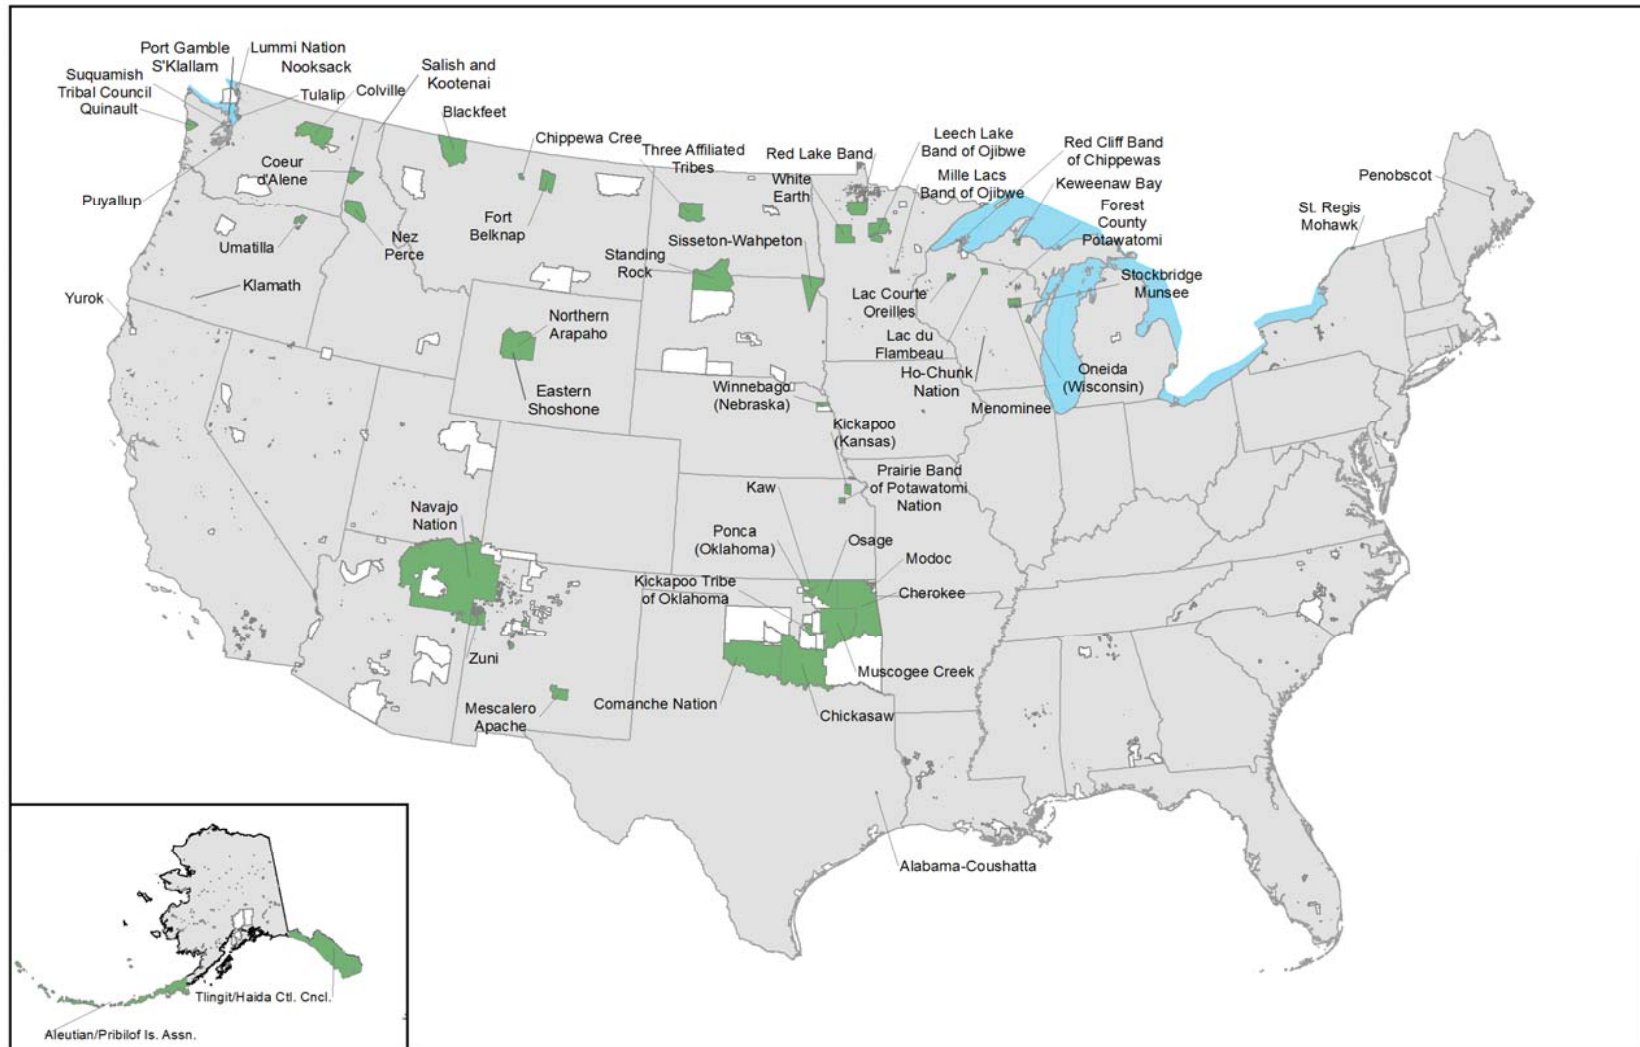

Finally, in 1997, P.L. 105-33 (the Balanced Budget Act of 1997), which in part made numerous technical amendments to the 1996 welfare reform law (P.L. 104-193), made minor changes to eliminate ambiguity in the provision that allowed state CSE agencies to enter into cooperative agreements with an Indian tribe or tribal organization. The 1997 act also clarified that direct federal funding could be given to an Indian tribe or tribal organization that demonstrates the capacity to operate a tribal CSE program that meets the objectives of the CSE program, “including the establishment of paternity, establishment, modification, and enforcement of support orders, and location of absent parents.”<sup>18</sup>

---

<sup>17</sup> 45 C.F.R. § 309.130(c), p. 325 (October 1, 2009, edition).

<sup>18</sup> 42 U.S.C. 655(f). According to OCSE-AT-98-21 (July 28, 1998), it is not necessary that the tribe comply with every federal CSE regulation in order to qualify for a cooperative agreement with a state CSE agency.

**Figure I. Map of Tribal CSE Programs**

**Source:** Congressional Research Service, based on data from the Office of Child Support Enforcement, Department of Health and Human Services.

**Notes:** Tribal CSE programs are labeled and shaded. Areas of tribes without tribal CSE programs are outlined, but not labeled or shaded. Hawaii is not shown because it has no federally recognized Indian tribes. The Comanche Nation area shown is the Kiowa-Comanche-Apache Oklahoma Tribal Statistical Area (OTSA) determined by the Census Bureau. Alaska areas shown are Alaska Native Regional Corporation (ANRC) statistical areas determined by the Census Bureau.

## Tribal CSE Programs

Part of the mission of the federal Office of Child Support Enforcement (OCSE) is to provide direction, guidance, technical assistance, and oversight to state and tribal CSE program offices. The Assistant Secretary for Children and Families is the official director of OCSE, but the deputy director/commissioner manages daily operation of the OCSE. OCSE's Division of Special Staffs works with tribal CSE programs. In addition, there are federal CSE staff in each of the Administration for Children and Families' 10 regional offices who are assigned to work on tribal matters. Regional office staff work directly with states and tribes on program implementation and operations. Central and regional offices collaborate to assess state and tribal needs, and to provide technical assistance, policy clarification, training, and support for CSE programs.<sup>19</sup>

Indian tribes and tribal organizations that choose to operate a tribal CSE program must run programs that conform to the objectives of the state CSE program and are in compliance with the tribal CSE program regulations. However, federal regulations provide some flexibility that allows tribes and tribal organizations to develop and administer tribal CSE programs that are consistent with the tribe's law and tradition. Moreover, some CSE program documents indicate that tribes and tribal organizations should review the regulatory requirements to determine if a CSE program is appropriate for their tribe or tribal organization.<sup>20</sup>

## Requirements for Operating a Tribal CSE Program

A tribal CSE plan must include the following components in order to be approved by HHS and thereby receive federal funds for its operation:<sup>21</sup> (1) a description of the population subject to the jurisdiction of the tribal court or administrative agency for child support purposes, (2) evidence that the tribe has in place procedures for accepting all applications for CSE services and providing CSE services required by law and regulation, (3) assurance that due process rights are protected, (4) administrative and management procedures, (5) safeguarding procedures, (6) maintenance of records, (7) copies of applicable tribal laws and regulations, (8) procedures for the location of noncustodial parents, (9) procedures for the establishment of paternity, (10) guidelines for the establishment and modification of child support obligations, (11) procedures for income withholding, (12) procedures for the distribution of child support collections, (13) procedures for intergovernmental case processing, and (14) tribally determined performance targets.<sup>22</sup>

In addition, federal law and regulations permit tribes or tribal organizations that cannot satisfy all of the 14 requirements but that can demonstrate their capacity to operate a CSE program to

---

<sup>19</sup> Office of Child Support Enforcement, "Building a Tribal IV-D Program: A Guide to the Start-Up Application Process," Information Memorandum IM-05-06, June 22, 2005, p. 1.

<sup>20</sup> Ibid, p. 4.

<sup>21</sup> A tribe or tribal organization may submit a tribal CSE program application at any time. The HHS Secretary or his or her designee must determine whether the application meets the specified requirements within 90 days of receipt. If the HHS Secretary or designee needs additional information, the tribe will be notified to provide the needed material. The HHS Secretary or the designee must approve or disapprove the application within 45 days of receipt of the additional information. A tribe or tribal organization may re-apply at any time after it has resolved the matter that led to the disapproval of its CSE program. (Source: Title 45 C.F.R. sections 309.35 and 309.50, p. 315 and p. 317 (October 1, 2008, edition).)

<sup>22</sup> *Federal Register*, vol. 69, no. 61, March 30, 2004, p. 16643.

request start-up funding.<sup>23</sup> Such tribes or tribal organizations must submit a program development plan to HHS that indicates their ability to meet certain milestones, and meet the 14 required components mentioned above within a certain timeframe.

### **Jurisdictional Requirement Related to a Minimum Number of Children**

There are 564 federally recognized tribal governments in the United States. According to Census Bureau data, based on race, there were 2.9 million persons who classified themselves as solely American Indian or Alaska Native (AIAN) in 2010, representing about 1% of the U.S. population.<sup>24</sup> The 2010 Census data indicate that 30% of AIAN persons are under the age of 18.<sup>25</sup> Because the enrollment of federally recognized tribes varies widely (some tribes have fewer than 10 persons while others have over 200,000 persons<sup>26</sup>) it is likely that many tribes will have fewer than 100 children under age 18.

To obtain approval of its tribal CSE plan, a tribe or tribal organization must certify that there are at least 100 children under the age of majority (as defined by tribal law or code) in the population subject to the jurisdiction of the tribal court or administrative agency.<sup>27</sup> This may include Indian children who are not members of the applying tribe but who reside on the reservation. In addition, children who are members of the tribe do not have to live on the tribe's reservation in order for the tribal court or administrative agency to have jurisdiction over such children. Moreover, children of employees of the tribe and its tribal enterprises or privately owned tribal business on the reservation who reside either on or off reservation may also be included, provided they are subject to the jurisdiction of the tribal court or administrative agency.<sup>28</sup>

### **Administrative and Management Procedures and Recordkeeping**

The tribal CSE plan must include a description of the tribal administering agency and the distribution of responsibilities within the agency. The plan must include evidence that all federal funds and amounts collected by the tribal CSE agency are protected against loss. Tribes and tribal organizations may comply with this requirement by submitting documentation that every person who receives, disburses, handles, or has access to or control over funds collected is covered by a bond or insurance sufficient to cover all losses. The plan must include procedures under which notices of child support collected, itemized by month of collection, are provided to families receiving services under the tribal CSE program at least once a year and to either the custodial or noncustodial parent upon request.<sup>29</sup>

<sup>26</sup> U.S. Department of the Interior, Bureau of Indian Affairs, 2005 American Indian Population and Labor Force Report, Washington, DC, <http://www.bia.gov/idc/groups/public/documents/text/idc-001719.pdf>.

<sup>27</sup> CSE law allows a tribe or tribal organization to receive a waiver from the 100-children rule if it can demonstrate to the HHS Secretary that it can operate a CSE program with fewer than 100 children.

<sup>28</sup> Office of Child Support Enforcement, Action Transmittal (OCSE-AT-05-07), May 12, 2005, p. 2 and p. 7.

<sup>29</sup> 45 C.F.R. § 309.75, p. 320 (October 1, 2009, edition).

If the tribal CSE agency intends to charge an application fee, the plan must contain provisions that the fee will be uniformly applied and cannot exceed \$25; that in intergovernmental cases referred for services, the application fee may only be charged by the jurisdiction in which the individual applies for services; that fees may not be charged to individuals receiving services under Titles IV-A (TANF), IV-E (foster care assistance), or XIX (Medicaid) of the Social Security Act; and that the tribal CSE agency may recover actual costs of providing services in excess of the application fee. Child support application fees collected and costs recovered are considered program income and must be used to reduce the amounts of expenditures for federal matching. In other words, the tribal CSE agency must exclude from its quarterly expenditure claims an amount equal to all fees collected and costs recovered during the quarter.<sup>30</sup>

The tribal CSE plan is required to provide that the tribal CSE agency will maintain records necessary for proper and efficient operation of the program, including records regarding (1) applications for child support services; (2) efforts to locate noncustodial parents; (3) actions taken to establish paternity and obtain and enforce child support; (4) amounts of child support owed, child support arrearages, and amounts and sources of child support collections, and the distribution of such collections; (5) tribal CSE program expenditures; (6) any fees charged and collected, if applicable; and (7) statistical, fiscal, and other records necessary for reporting and accountability.<sup>31</sup>

## **Program Services Requirements**

The tribal CSE agency is required by federal law to extend the full range of services available under its tribal CSE plan to states and other tribal CSE programs, and also to respond to all requests from, and to cooperate with, states and other tribal CSE programs.

### ***Locating Absent Parents***

The tribal CSE plan must include provisions governing the location of custodial and noncustodial parents and their assets. The tribal CSE agency must attempt to locate custodial and noncustodial parents or sources of income and/or assets when location is required to take necessary action in a case, and must use all sources of information and records reasonably available to locate custodial<sup>32</sup> and noncustodial parents and their sources of income and/or assets.

Tribes have many options and resources for obtaining location information, such as friends and relatives of the party being located; tribal employment records; tribal records; utilities; the United States Postal Service; organizations such as labor unions or professional associations; federal, state, local, or tribal tax departments; real estate records; law enforcement; credit bureaus; public assistance and social services agencies; the Department of Natural Resources; and licensing boards (e.g., motor vehicle, professional, recreation).<sup>33</sup>

---

<sup>30</sup> Ibid.

<sup>31</sup> 45 C.F.R. § 309.85, p. 321 (October 1, 2009, edition).

<sup>32</sup> The reference to custodial parents is included to ensure that locate sources are used to find custodial parents for whom support has been collected and whom the tribe may be unable to find. (Source: *Federal Register*, vol. 69, no. 61, March 30, 2004, p. 16644).

<sup>33</sup> Office of Child Support Enforcement, “OCSE Training Courses for Tribal IV-D Programs—Locate Module,” <http://www.acf.hhs.gov/programs/cse/resources/tribal/training/>.

Tribes and tribal organizations may also contact any other tribal, state, or federal agencies that may have information, such as the Fish and Game Commission or the Conservation Agency. Other locate options tribes and tribal organizations may select include directly accessing a state system or requesting information from a state system. Currently, tribes and tribal organizations are not authorized to request Federal Parent Locator Service information,<sup>34</sup> but a resident parent, legal guardian, agent, or attorney of a child may request locate information through the state CSE agency if location assistance is needed for child support purposes.<sup>35</sup>

### *Paternity Establishment*

The tribal CSE agency must attempt to establish paternity by the process set out under tribal law, code, and/or custom. It must also provide the alleged father an opportunity to voluntarily acknowledge paternity. In a contested paternity case, the child, the mother, and the alleged father or fathers (more than one man may be alleged as the father) must submit to a genetic test (unless otherwise barred by tribal law) upon the request of any party if the request is supported by a sworn statement that (1) alleges paternity, and sets forth facts establishing a reasonable possibility of the requisite sexual contact between parties; or (2) denies paternity, and sets forth facts establishing a reasonable possibility of the nonexistence of sexual contact between the parties. Federal regulations clarify that establishment of paternity under tribal CSE programs does not infer tribal enrollment or membership.<sup>36</sup>

To meet tribal CSE plan requirements, tribal law must explicitly provide for genetic testing. Like state CSE programs, a tribe may have a conclusive presumption of paternity when a child is born to married parents or if a noncustodial parent has been validly served in a paternity proceeding and failed to contest paternity in such proceeding. Also, some tribal CSE programs may recognize a man who holds himself out to be the father as the father, and in effect deem the man to be the father and thereby may preclude that man from challenging paternity. Federal regulations allow the tribal CSE program to prohibit genetic testing in cases such as those mentioned above in which the tribe had already determined or stipulated paternity. In such cases, because paternity had already been determined, genetic testing would thereby be barred by tribal law.<sup>37</sup> Federal regulations also stipulate that the tribal CSE agency is not required to establish paternity in any case involving incest or rape, or in a case in which legal proceedings for adoption are pending.<sup>38</sup>

When genetic testing is used to establish paternity, the tribal CSE agency must identify and use accredited laboratories, which perform at reasonable cost legally and medically acceptable genetic tests that seek to identify the father or exclude the alleged father.<sup>39</sup>

---

<sup>34</sup> According to an HHS document, direct access for Indian tribes to the Federal Income Tax Refund Offset program and the Federal Parent Locator Service could result in about \$100 million in additional collections to tribal families over a five-year period. (Source: HHS Justification of Estimates for Appropriations Committees, Administration for Children and Families, FY2004, p. B-14.)

<sup>35</sup> Office of Child Support Enforcement, "OCSE Training Courses for Tribal IV-D Programs—Locate Module," <http://www.acf.hhs.gov/programs/cse/resources/tribal/training/>. (Note: States may charge tribes for these services.)

<sup>38</sup> 45 C.F.R. § 309.100, p. 321 (October 1, 2009, edition).

<sup>39</sup> Probability of exclusion testing can exclude 95%-99% of falsely accused men. In other words, the test generally is able to determine that a man is "not" the father of a given child. Thus, there is a very high probability the test will exonerate a falsely accused man. The exclusion probability has nothing to do with the likelihood that a non-excluded (continued...)

### ***Child Support Order Establishment and Modification***

The tribal CSE plan must establish one set of child support guidelines by law or by judicial action for setting and modifying child support obligation amounts; include a copy of the child support guidelines; and indicate whether noncash payments of support will be permitted to satisfy the child support obligation. However, pursuant to federal regulations, noncash payments may not be used to satisfy assigned support obligations (i.e., child support obligations for children receiving TANF cash benefits).<sup>40</sup>

Federal regulations define “noncash support” as “support provided to a family in the nature of goods and/or services, rather than in cash, but which, nonetheless, has a certain and specific dollar value.”<sup>41</sup> The noncash support must directly contribute to the needs of a child, such as “making repairs to automobiles or a home, the clearing or upkeep of property, providing a means for travel, or providing needed resources for a child’s participation in tribal customs and practices.”<sup>42</sup> A tribal support order allowing noncash payments must state the specific dollar amount of the support obligation.

The tribal CSE plan must provide for the application of the guidelines unless there is a written finding or a specific finding on the record of the tribunal that the application of the guidelines would be unjust or inappropriate in a particular case. The guidelines must take into account the needs of the child and the earnings and income of the noncustodial parent and be based on specific descriptive and numeric criteria.<sup>43</sup>

The child support guidelines must be reviewed, and if appropriate revised/modified, at least every four years and must provide a rebuttable presumption that the child support award is the correct amount based on the guidelines.<sup>44</sup>

The tribe or tribal organization must also provide assurances that it will recognize child support orders issued by other tribes and tribal organizations, and by states, in accordance with the requirements under 28 U.S.C. 1738B, the Full Faith and Credit for Child Support Orders Act.<sup>45</sup>

Tribal child support orders are established through use of tribal courts, Code of Federal Regulations (CFR) Courts,<sup>46</sup> state courts, administrative processes, mediators prior to going to

(...continued)

man may be the father. Probability of paternity testing examines the similarities between the alleged father’s blood and the child’s and a calculation is made regarding the statistical likelihood of paternity based on the chance of such similarities occurring in a random male in the general population. Probability of paternity testing generally can determine with almost 100% probability that a man is the father of a given child.

<sup>44</sup> *Ibid.*

<sup>45</sup> *Ibid.*, p. 324.

<sup>46</sup> Courts of Indian Offenses are courts operated by the U.S. Department of the Interior, Bureau of Indian Affairs, on certain reservations. Those courts operate under federal regulations contained in Volume 25 of the Code of Federal Regulations and thus are often referred to as “CFR” courts.

court, and agreement orders. Most tribes use petitions to establish child support orders. Means of serving process include tribal process servers, tribal police, tribal security officers, private process servers, sheriffs, voluntary service via sending a letter to the individual, court bailiffs, and subpoena or summons.<sup>47</sup>

Jurisdictional issues affect how cases are established. Some tribes exert jurisdiction over tribal members, no matter where they are in the country, based on enrollment factors. Other tribes assert that they have concurrent jurisdiction in paternity cases when the child was born off the reservation but to an enrolled tribal member.<sup>48</sup> Jurisdictional claims between tribes and states are sometimes very contentious and it can be hard for either entity to give up jurisdiction.<sup>49</sup>

### ***Medical Child Support***

There is no current requirement that tribal support orders include medical support.<sup>50</sup> However, there is no prohibition for a tribal support order to do so. Tribes are encouraged to make sure that children have access to medical care through the Indian Health Service (IHS) or otherwise.<sup>51</sup> The IHS is an agency of the United States Public Health Service, within HHS. It does not provide health insurance coverage. But, it is responsible for providing federal health services to the American Indians and Alaska Natives who belong to the 564 federally recognized tribes.<sup>52</sup>

### ***Enforcement/Income Withholding***

Tribal CSE agencies are responsible for enforcing child support orders. However, tribes are only mandated to use the income withholding enforcement method. Any other enforcement actions they take are solely at the tribe's discretion and are based on tribal policies, procedures, ordinances, and codes. Some of these enforcement remedies include several procedures that must be done collaboratively with states, such as federal income tax refund intercepts, bank levies, liens against non-reservation property, state hunting and fishing license suspensions, state fishing taxes, and passport denials.

---

<sup>47</sup> Office of Child Support Enforcement, "Tribal Child Support Enforcement Systems Workgroup, Session III Joint Application Development Final Report," October 2005, p. 15.

<sup>48</sup> Ibid.

<sup>49</sup> Pursuant to federal regulations, tribes are required to provide in their Tribal CSE Plan a description of the population subject to the jurisdiction of the tribe for child support purposes (45 C.F.R. §309.65(a)(1) and 45 C.F.R. §309.70 ).

<sup>50</sup> Federal law mandates that states have procedures under which all child support orders are required to include a provision for medical support for the dependent child to be provided by either or both parents. Medical support is the legal provision of payment of medical, dental, prescription, and other health care expenses for dependent children. It can include provisions for health care coverage, such as coverage under a health insurance plan (including payment of premium costs, co-payments, and deductibles) as well as cash payments for a dependent child's medical expenses. Pursuant to changes mandated by the Deficit Reduction Act of 2005 (P.L. 109-171), if appropriate health insurance is available to either parent, states are required to establish an order requiring that the children be placed on such coverage with appropriate cost sharing. Moreover, states now are able to enforce such orders against both custodial and noncustodial parents.

<sup>51</sup> *Federal Register*, vol. 69, no. 61, March 30, 2004, p. 16660.

<sup>52</sup> U.S. Department of Health and Human Services, Office of Child Support Enforcement, "Tribal and State Jurisdiction to Establish and Enforce Child Support," March 12, 2007, p. 89, <http://www.acf.hhs.gov/programs/cse/pol/IM/2007/im-07-03.htm>.

Some examples of innovative methods that tribes and tribal organizations use to encourage timely and consistent payment of child support include the following: (1) some non-paying noncustodial parents are required to explain to an Elders' Panel why they are not supporting their children; (2) some tribes allow per capita payments<sup>53</sup> to be intercepted to meet child support obligations; (3) tribes with casinos may be able to withhold past-due child support (i.e., child support arrearages) from the winnings of tribal members; (4) reservation fishing taxes; (5) reservation hunting and fishing license suspension; (6) gaming license suspension; and (7) in cases where a noncustodial parent has been unable to find a job and make child support payments, a tribe can request that the court or administrative agency mandate a course of action to improve the noncustodial parent's employability (e.g., attending classes to obtain a certificate of general educational development or high school equivalent, undergoing alcohol or drug abuse treatment, undertaking a work search, attending trade classes).<sup>54</sup>

As noted above, with respect to child support enforcement/collection activities, tribes are only required to use the income withholding enforcement method. The income withholding requirements are similar to those requirements governing states' CSE programs, except that income is subject to withholding once the noncustodial parent has failed to make a payment equal to the support payable for one month.<sup>55</sup> Income withholding is not to be required in any case where either the custodial or noncustodial parent demonstrates, and the tribunal enters a finding, that there is good cause not to require income withholding; or where a signed written agreement is reached between the custodial and noncustodial parent that provides for an alternate agreement. The tribal CSE agency must allocate amounts withheld across multiple withholding orders, and in no case shall the allocation result in a withholding for one of the orders not being implemented. The tribal CSE agency is responsible for receiving and processing income withholding orders from states or other tribes and ensuring orders are promptly served on employers.<sup>56</sup>

### *Distribution of Child Support*

CSE regulations stipulate that tribes have the option to condition eligibility for Tribal TANF assistance on assignment of child support.<sup>57</sup> A tribal CSE plan must outline procedures for distribution of child support collections. As a general rule, the tribal CSE agency must, in a timely manner, apply collections to satisfy current support obligations first, and pay all child support collections to the family unless the family is currently receiving or has formerly received assistance from the tribal TANF program and the state has opted to condition eligibility for tribal TANF assistance on assignment of child support rights,<sup>58</sup> or the tribal CSE agency has received a

---

<sup>53</sup> "Per capita payments," in this context, are payments by a tribe to its individual members (e.g., from tribal trust property, gaming, or Indian claims awards). Such payments may also include Indian claims awards by the United States paid directly to individual members.

<sup>54</sup> Office of Child Support Enforcement, "OCSE Training Courses for Tribal IV-D Programs—Enforcement Module," <http://www.acf.hhs.gov/programs/cse/resources/tribal/training/>.

<sup>55</sup> Delinquency-based income withholding was made obsolete for state CSE programs when P.L. 100-485 (the Family Support Act of 1988) established immediate income withholding. The Family Support Act of 1988 greatly expanded income withholding by requiring immediate withholding to begin in November 1990 for all new or modified orders being enforced by states. Equally important, states were required, with some exceptions, to implement immediate wage withholding in all support orders initially issued on or after January 1, 1994, regardless of whether a parent has applied for child support services.

<sup>56</sup> *Federal Register*, vol. 69, no. 61, March 30, 2004, p. 16645.

<sup>57</sup> 45 C.F.R. § 286.155, p. 200 (October 1, 2009, edition).

<sup>58</sup> *Ibid.*

request for assistance in collecting support on behalf of the family from a state or another tribal CSE agency. Such requests for assistance may be to collect child support assigned to the state or tribe as a condition of receiving TANF assistance or to provide CSE services on behalf of a family residing in or receiving services from the referring state or tribe. When support is owed to both states and tribes, the tribal CSE agency may either send collections to the requesting state or tribe for distribution or determine appropriate distribution by contacting the requesting state or tribe and distribute collections accordingly. Federal regulations with regard to tribal CSE programs stipulate that any child support collections obtained through the Federal Income Tax Refund Offset program must be applied to satisfy child support arrearages.<sup>59</sup>

### ***State and Tribal Cooperation and Coordination***

Federal regulations require states to extend the full range of services available under its CSE plan to all tribal CSE programs.<sup>60</sup> Prior to the 1996 law, although state CSE agencies had the resources to obtain child support on behalf of Native American children, they usually lacked jurisdiction over tribal members. In contrast, tribal courts often did not have the resources to obtain child support on behalf of tribal members. Federal law now addresses the issue of nonpayment of child support, in part, by authorizing states and tribes to enter into cooperative agreements to facilitate obtaining child support for Native American children.

Realistically, in order to better serve Indian children, tribes must utilize the existing infrastructure of state CSE programs.<sup>61</sup> Federal regulations authorize tribal CSE programs to enter into cooperative arrangements with states. Pursuant to the regulations, a tribe may delegate functions of the tribal CSE program to another tribe, a state, or another agency or entity pursuant to a cooperative arrangement, contract, or tribal resolution, but the tribal CSE agency retains ultimate responsibility for meeting the CSE plan requirements.<sup>62</sup> Moreover, tribes may enter into agreements with any entity, including contracts with a private vendor, to carry out the functions required in the tribal CSE plan. Federal regulations make clear that tribes, not states, are to be held accountable for the proper operation of tribal CSE programs, including all actions undertaken on behalf of such programs. In other words, if the tribe or tribal organization delegates any of the functions of operating a CSE program to another tribe, state, or any other agency, the tribe is still responsible for compliance with the approved tribal CSE plan.<sup>63</sup>

Tribal cooperative agreements with state CSE agencies were part of the 1996 welfare reform law. Cooperative agreements under section 454(33) of the Social Security Act are between a state CSE program and a tribe. The tribe performs agreed-upon activities and the state CSE program reimburses the tribe for these activities. These cooperative agreements are under a state CSE program and tribes must follow the state CSE program requirements within the scope of cooperative agreement responsibilities. The state is ultimately responsible for the operation of its CSE program and ensuring all requirements are met. However, if a tribal CSE program enters into a cooperative agreement with a state under Section 455(f) of the Social Security Act, for the state

---

<sup>59</sup> 45 C.F.R. § 309.115, p. 323 (October 1, 2009, edition).

<sup>60</sup> 45 C.F.R. § 302.36(a)(2), p. 234 (October 1, 2009, edition).

<sup>61</sup> State CSE infrastructure includes the Federal and State Parent Locator Service, the National Directory of New Hires, state centralized units for the collection and distribution of child support payments (i.e., State Disbursement Units), and the array of state collection/enforcement methods.

<sup>62</sup> 45 C.F.R. §309.60(c), p. 318 (October 1, 2009, edition).

<sup>63</sup> *Federal Register*, vol. 69, no. 61, March 30, 2004, p. 16651.

to perform a service for the tribe, the state must meet tribal CSE requirements applicable to the actions taken pursuant to the cooperative agreement. Under this type of cooperative agreement, the tribe is ultimately responsible for the operation of its CSE program and for ensuring that all tribal CSE program requirements are met.<sup>64</sup>

In addition to the formal cooperative agreements, some commentators contend that the best interests of Native American children could be better served if states would incorporate the following procedures into their interactions with tribes and tribal organizations: (1) to determine if someone is enrolled in a tribe, ask the person for his or her Certificate of Degree of Indian Blood (CDIB) card or verification of Tribal Membership card; (2) remember that each tribe is different, with its own laws; (3) find out what procedure(s) are required to register a state support order for enforcement with the tribe; (4) coordinate service of process in Indian country with the tribe (e.g., when personal service is required, tribal authorities are often the most appropriate individuals for serving state process on a reservation); (5) rely on state and tribal court clerks for information regarding pleadings, required forms, and filing deadlines and procedures; and (6) ascertain tribal court practices and procedures (e.g., an attorney's authority/admission to practice law in a state court does not automatically mean that the attorney is admitted to practice in a tribal court in that state).<sup>65</sup> Also, child support administrators generally agree that cooperation between tribes and states is enhanced when common goals can be identified and articulated and an open dialogue is maintained between the tribes and state CSE staff.<sup>66</sup>

## **Automated Systems**

With respect to the CSE program operated by states, there is widespread agreement that the achievement of CSE program goals depends in large part on the effective planning, design, and operation of automated systems. Automating CSE information systems generally improves caseworker productivity by allowing automatic searches of a variety of databases and eliminating the need for voluminous paper documentation. Automated CSE systems also help track court actions relating to paternity and support orders and amounts of collections and distributions.

With respect to tribal CSE programs, many commentators and interested parties contend that automation is necessary for tribes and tribal organizations to accurately and efficiently process child support collections. These commentators argue that the costs for development of automated programs should be allowable expenditures for tribal CSE programs (i.e., tribal expenditures for development of data systems should be eligible to receive federal matching funds).<sup>67</sup>

Before the final regulations (released February 25, 2010) on tribal CSE automated systems, development of automated data processing systems was not an allowable activity or expenditure

<sup>67</sup> *Federal Register*, vol. 73, no. 113, Computerized Tribal IV-D Systems and Office Automation—Notice of Proposed Rule Making, June 11, 2008, p. 33049.

for comprehensive tribal CSE programs. They were generally only permitted to receive federal funding for costs associated with the establishment of intergovernmental agreements with states and tribes for the use of an *existing* automated data processing computer system necessary to support tribal CSE program operations.<sup>68</sup> In contrast, the recently released final regulations regarding computerized tribal CSE systems expand allowable activities and costs incurred by comprehensive tribal CSE programs with regard to automated data processing computer systems to include the installation, operation, maintenance, and enhancement of a *model* tribal system that is described in the regulations.<sup>69</sup> Comprehensive tribal CSE programs that are operating within the first three-year period of federal funding are reimbursed for 90% of the cost of their automated systems expenditures. Comprehensive tribal CSE programs operating after the initial three-year period are reimbursed for 80% of their automated systems expenditures.

Automated systems have, to a certain extent, reduced barriers that were often faced by some tribes who were geographically isolated from access to certain state or county CSE services. Concomitantly, an administrative structure that depends primarily on automation might be at odds with the types of flexible, face-to-face assistance that is often successful on Indian reservations.

## **Funding**

Federal funding is based on the tribal CSE application, which includes the proposed budget and a description of the nature and scope of the tribal CSE program and gives assurance that the program will be administered in conformity with applicable requirements of the CSE program (Title IV-D of the Social Security Act), federal regulations, and other official issuances of HHS that specifically apply to tribes and tribal organizations.

A tribe or tribal organization may apply for federal funding in one of two ways. A tribe or tribal organization may apply to operate a CSE program that meets all of the 14 mandated requirements (as specified in federal regulations) for a tribal CSE program.<sup>70</sup> If the tribe or tribal organization can apply on this basis, it is considered a comprehensive tribal CSE program if it is approved by the HHS Secretary. If a tribe or tribal organization does not currently meet the regulatory requirements, it may apply for start-up funding. A tribe or tribal organization that applies on this basis (and has such a plan approved) is considered to be operating a tribal CSE start-up program.<sup>71</sup>

Unlike state CSE programs that are funded by both state and matching federal dollars, tribal CSE programs that are designated as start-up programs can be funded solely by federal dollars. Tribal CSE programs that are considered fully operational (i.e., comprehensive programs) are funded at 90% of total program expenditures for the first three years of the program, and at 80%

---

<sup>68</sup> Before the final regulations (February 25, 2010), tribal CSE programs generally managed and tracked their child support cases manually or contracted with the state to use their automated CSE system (45 C.F.R. §309.145(h)).

<sup>69</sup> *Federal Register*, vol. 75, no. 37, February 25, 2010, p. 8508.

<sup>70</sup> According to OCSE officials, although nine tribes began operating CSE programs after the 1996 legislation (P.L. 104-193) and before the final regulations on tribal CSE programs were published, those nine tribes had to reapply for direct CSE funding once the final regulations were issued.

<sup>71</sup> Office of Child Support Enforcement, Information Memorandum (IM-05-06), "Building a Tribal IV-D Program: A Guide to the Start-Up Application Process," June 22, 2005, <http://www.acf.hhs.gov/programs/cse/pol/IM/2005/im-05-06.htm>.

thereafter.<sup>72</sup> The non-federal share of CSE program expenditures may be in cash and/or in-kind, fairly valued, by the tribe or tribal organization and/or by a third party. Both state and comprehensive tribal CSE programs are considered entitlement programs and they both receive mandatory funding on an open-ended basis (meaning that they receive federal matching funding for all reasonable, necessary, and allocable expenditures on the CSE program).

Federal funds are available for the costs associated with operating a tribal CSE program that has been approved by the HHS Secretary, provided that the Secretary determines that such costs are reasonable, necessary, and allocable to the tribal CSE program.<sup>73</sup> Federal regulations provide a list of the kinds of activities and costs that can receive federal reimbursement. Federal regulations also stipulate that tribal CSE program funds may not be used for (1) activities related to administering other programs, including those under the Social Security Act; (2) construction and major renovations; (3) any expenditures that have been reimbursed by fees or costs collected, including any fee collected from a state; (4) expenditures for jailing of parents in tribal CSE cases; (5) the cost of legal counsel for indigent defendants in tribal CSE program actions; (6) the cost of guardians ad litem in tribal CSE cases; and (7) all other costs that are not reasonable, necessary, and allocable to tribal CSE programs.<sup>74</sup>

## **Start-Up Programs**

As mentioned earlier, federal law and regulations permit tribes or tribal organizations that cannot satisfy all of the 14 mandatory provisions but that can demonstrate their ability to operate a CSE program to request start-up funding. Start-up funding is for tribes to develop a CSE program that will allow them to meet all the regulation requirements of a comprehensive child support program. Allowable start-up costs and activities include planning for the initial development and implementation of a program; developing tribal CSE laws, codes, guidelines, systems, and procedures; recruiting, hiring, and training tribal CSE program staff; and any other reasonable costs.<sup>75</sup>

During the period of start-up funding, a tribe or tribal organization will receive federal funds equal to 100% (subject to a capped amount) of the approved and allowable CSE expenditures made during that period.<sup>76</sup> Tribes and tribal organizations that receive start-up funding do not

---

<sup>72</sup> Federal funding of tribal CSE programs differs significantly from state CSE programs. The federal government reimburses each state for 66% of the cost of operating its CSE program. In addition, the federal government pays states an incentive payment to encourage them to operate effective programs. For additional information on the financing of state CSE programs, see CRS Report RL33422, *Analysis of Federal-State Financing of the Child Support Enforcement Program*, by Carmen Solomon-Fears.

<sup>73</sup> After enactment of the 1996 legislation that provided direct funding for tribes and before the final regulations on tribal CSE programs were issued in 2004, OCSE gave tribes Special Improvement Project (SIP) grants to operate their tribal CSE programs. The purpose of the SIP grant program is to provide funding for projects that further the national child support mission and goals and to help improve program performance. SIP's legislative authority is Section 452(j) of the Social Security Act, and it provides federal funds for research and demonstration programs and special projects of regional or national significance relating to the operation of state child support enforcement programs. No applicant match is required. Eligible applicants include state and local public agencies, nonprofit agencies (including faith-based organizations), and tribal organizations.

<sup>74</sup> 45 C.F.R. §309.155, p. 330 (October 1, 2009, edition).

<sup>75</sup> *Federal Register*, vol. 69, no. 61, March 30, 2004, p. 16647.

<sup>76</sup> Pursuant to federal regulations (45 C.F.R. § 309.16), tribal CSE start-up programs must have the capability to meet all 14 components of a comprehensive tribal CSE program within a reasonable period of time, not to exceed two years. In other words, a tribal CSE start-up program can potentially receive 100% federal matching for up to two years.

have to put up non-federal matching funds for their CSE programs. Federal funds are available for the costs of developing a tribal CSE program that meets federal requirements, provided that such costs are reasonable, necessary, and can be allocated to the program.<sup>77</sup> For start-up tribal CSE programs, 100% federal funding is limited to \$500,000, and there is no tribal match required.<sup>78</sup> Start-up funding must be obligated and liquidated within two years of the date in which the start-up application was approved.

## **Comprehensive Programs**

Tribes or tribal organizations that can meet all of the 14 mandatory provisions (such programs are considered comprehensive or fully operating programs) receive 90% federal funding during the first three years of full program operation. The tribe or tribal organization must provide a 10% tribal match in order to receive the federal funding.<sup>79</sup>

After the initial three-year period of operating a comprehensive tribal CSE program, the tribe or tribal organization will receive 80% federal funding each year thereafter for their tribal CSE program if the tribe continues to meet federal requirements. The tribe or tribal organizations must provide a 20% tribal match in order to receive the federal funding.<sup>80</sup>

## **Financing Mechanics**

In order to receive federal funding, a tribal CSE agency must submit the following budgetary information: a quarter-by-quarter estimate of CSE expenditures for the fiscal year; notification of whether the tribe or tribal organization is requesting funds for indirect costs; a narrative justification for each of the required elements of the program (that are listed on the application form—start-up program may not include all of the 14 mandatory components); and either a statement certifying that the tribe or tribal organization has or will have the non-federal share of program expenditures available, as required, or a request for a waiver of the non-federal share.<sup>81</sup>

Unlike the state CSE program, which is funded on a prospective quarterly basis, tribal CSE programs that qualify for funding of less than \$1 million per 12-month period receive a single annual award of the total amount. However, tribal CSE programs with funding of \$1 million or more per 12-month period will receive quarterly awards similar to state CSE programs. OCSE documents indicate that the funding for tribal CSE activities is completely separate from funding for state CSE programs. A tribe's decision to run its own CSE program does not impact a state's CSE program funds. This means that tribal CSE funding is not apportioned from a state's CSE

---

<sup>77</sup> Tribal CSE funds may not be used for activities related to administering other programs, including those under the Social Security Act; construction or major renovations; expenditures that have been reimbursed by fees collected, including any fee collected from a state; jailing of parents in tribal CSE cases; the cost of legal counsel for defendants in tribal CSE actions; or any other costs that are not reasonable, necessary, and allocable to the tribal CSE program.

<sup>78</sup> Federal funding for tribal CSE program development generally may not exceed a total of \$500,000 except in very unusual or extraordinary circumstances. According to federal regulations (45 C.F.R. § 309.16), "in extraordinary circumstances, the Secretary will consider a request to extend the period of time during which start-up funding will be available and/or to increase the amount of start-up funding provided."

<sup>79</sup> 45 C.F.R. § 309.130, p. 325 (October 1, 2009, edition).

<sup>80</sup> *Ibid.*

<sup>81</sup> 45 C.F.R. § 309.15, p. 315 (October 1, 2009, edition).

funding. However, funds for the tribal CSE programs come from the same appropriation as the state CSE program.<sup>82</sup>

## Data

This section presents data on the number of Native Americans living in the United States, tribal population estimates, the percentage of Native American women who had children outside of marriage, living arrangements of Native American children, and the percentage of Native Americans with child support orders. It also provides statistical information on tribal CSE programs.

### Data Problems

Although the data are useful in developing an understanding of tribal CSE programs, there are several problems associated with the data. First, population data for federally recognized Indian tribes are elusive. No federal entity performs a census of members of federally recognized tribes such as the Census Bureau does for the U.S. population, so there are no detailed demographic or socio-economic data on tribal members alone. All Census Bureau data on American Indians and Alaska Natives (AIAN) are based on race, not tribal membership. The Census Bureau's decennial census and other surveys ask respondents to identify themselves by race, not by confirmed membership in a federally recognized tribe.<sup>83</sup> Not all persons self-identifying as AIAN are members of federally recognized tribes, and it may be that not all tribal members identify themselves as AIAN on the Census form. The decennial census does collect information by Indian reservation or other Census-developed statistical area, for almost all federally recognized tribes, so it can report AIAN race data (even if it cannot report membership) for a tribe's reservation or other statistical area. These reservation-specific AIAN decennial data may serve as proxies for actual tribal data. However, Census Bureau data collected through *non*-decennial sample surveys, such as the American Community Survey (ACS) or the Current Population Survey (CPS), cannot yet be used for the great majority of Indian areas because the Indian areas' populations are too small.<sup>84</sup>

The Bureau of Indian Affairs (BIA) publishes biennial estimates of its own service population—defined as AIAN living on or near a reservation and eligible for BIA services—based on figures received from federally recognized tribes. The BIA asks tribes to survey and provide estimates on their members, but does not require a tribe to carry out a census to prepare these figures.<sup>85</sup> The BIA report also lists tribal enrollment totals, as reported by the tribes, but the BIA does not conduct censuses to confirm these figures. The report does not provide tribal enrollees'

---

<sup>82</sup> *Federal Register*, vol. 69, no. 61, March 30, 2004, p. 16667.

<sup>83</sup> In the race question, the Census Bureau allows respondents to identify their tribe—still self-identification—but does not confirm a respondent's enrollment (or eligibility to be enrolled) in the tribe named. Hence, Census data on self-reported tribes cannot be assumed to correspond to data on federally recognized tribes.

<sup>84</sup> For ACS, see U.S. Census Bureau, "2008 American Community Survey: Overview of Census Geographic Areas in the United States and Puerto Rico," Table 1a, p. 2, [http://www.census.gov/acs/www/Downloads/2008\\_geography\\_notes.pdf](http://www.census.gov/acs/www/Downloads/2008_geography_notes.pdf). For CPS, see U.S. Census Bureau, Current Population Survey Design and Methodology, Technical Paper 66, October 2006, pp. 21-22, <http://www.census.gov/prod/2006pubs/tp-66.pdf>.

<sup>85</sup> U.S. Department of the Interior, Bureau of Indian Affairs, 2005 American Indian Population and Labor Force Report Washington, DC, pp. v-viii, <http://www.bia.gov/idc/groups/public/documents/text/idc-001719.pdf>.

geographic, demographic, or socio-economic data, so it cannot show where enrollees are living or their age or other characteristics. (See **Table C-1** in **Appendix C** for population figures from differing Census and BIA sources for CSE tribes and the nation.)

Another problem is that the tribal CSE program data include missing data related to implementation issues. It is also important to note that this report does not try to analyze the impact of factors such as size of tribe, wealth or poverty status of tribe, source of resources, employment opportunities, or administrative structures (courts, administering agencies, etc.) on the effectiveness of tribal CSE programs.

## **Demographic Information**<sup>86</sup>

In 2010, the Census Bureau estimated that there were about 5.2 million persons who were AIAN, either alone or in combination with other races. The number of these individuals who reported AIAN as their *only* race amounted to 2.9 million persons, or about 0.9% of the U.S. population, in 2010.<sup>87</sup> In 2010, 30% of persons classified as AIAN alone were under age 18.<sup>88</sup> As the discussion above indicated, these AIAN population figures are based on race, not on tribal membership; see **Appendix C** for other figures for the tribal population, for both the nation and each CSE tribe.

In 2010, about 66% of AIAN babies were born to unmarried mothers, compared with 17% of Asian or Pacific Islander babies, 29% of white babies, 53% of Hispanic babies, and almost 73% of black babies.<sup>89</sup>

In 2010, 52% of AIAN children were living in single-parent families, compared with 16% of Asian or Pacific Islander children, 24% of white children, 41% of Hispanic children, and 66% of black children.<sup>90</sup>

---

<sup>86</sup> Census Bureau data in this section are based on race.

<sup>87</sup> U.S. Census Bureau, *The American Indian and Alaska Native Population: 2010*, by Tina Norris, Paula L. Vines, and Elizabeth M. Hoeffel, 2010 Census Briefs, C2010BR-10, January 2012, p. 4 and p. 17.

<sup>88</sup> In 2010, 23% of whites were under age 18, as were 23% of Asians, 28% of African-Americans, 30% of Pacific Islanders, and 34% of Hispanics. (Source: U.S. Census Bureau, *The 2012 Statistical Abstract: The National Data Book*, p. 16.)

<sup>89</sup> U.S. Department of Health and Human Services, National Center for Health Statistics, "Births: Preliminary Data for 2010," by Brady E. Hamilton, Joyce A. Martin, and Stephanie J. Ventura, *National Vital Statistics Reports*, vol. 60, no. 2, November 2011, Table 1.

<sup>90</sup> Annie E. Casey Foundation, Kids Count Data Center, Data for 2010, <http://datacenter.kidscount.org/data/acrossstates/Rankings.aspx?ind=107>.

A special OCSE study that examined the CSE program with respect to minority families by analyzing pooled Census Bureau data from 1994 through 2002 found that, among custodial mothers, 51% of AIAN mothers had child support orders, compared with 66% of white mothers, 46% of Asian mothers, 43% of black mothers, and 42% of Hispanic mothers. Although AIAN mothers fared better than other minority mothers in terms of having child support orders, the rate at which noncustodial parents complied with those orders was lower for AIAN mothers than for many of their minority counterparts. For AIAN mothers who had a child support order, 67% received some child support, compared with 78% of white mothers, 70% of Hispanic mothers, 68% of Asian mothers, and 62% of black mothers.<sup>91</sup>

<b>Child Support Awards Among Custodial Mothers, by Race and Ethnicity (Pooled Data)</b>		
	<b>Percent with Child Support Orders</b>	<b>Percent Who Actually Received Some Child Support</b>
White	66%	78%
Black	43%	62%
Asian	46%	68%
AIAN	51%	67%
Hispanic	42%	70%

## CSE Tribal Information

Below are two tables that highlight some of the financial and statistical data on tribal CSE programs (in the aggregate and individually) provided by tribes and tribal organizations to the federal OCSE. It is probably unwise to draw conclusions from the data because the complexity of individual tribal CSE programs is overly simplified by the summary statistics shown in the tables, there are wide differences among program indicators in tribal CSE programs, and the tribal CSE programs have been operating for only a relatively short time. Moreover, unlike state CSE programs, tribal CSE programs do not have the benefit of federal auditors who assess the completeness and reliability of tribe-reported data.<sup>92</sup>

The data in **Table 1** and **Table 2** are based on information from tribes and tribal organizations on their tribal CSE programs. Just as the state CSE data do not include child support cases heard within the legal or administrative system of tribes or tribal organization, tribal CSE program information does not include data on cases that were not processed through the tribal CSE

<sup>91</sup> Department of Health and Human Services, Office of Child Support Enforcement, “Minority Families and Child Support: Data Analysis,” December 2007, pp. 3-4, <http://www.acf.hhs.gov/programs/cse/pol/DCL/2007/dcl-07-43a.pdf>.

<sup>92</sup> Pursuant to P.L. 105-200, states are accountable for providing reliable data on a timely basis or they receive no CSE incentive payments. (In addition to the 66% federal matching rate for state expenditures on child support activities, the federal government provides states with an incentive payment—based in part on five program performance measures—to encourage them to operate effective CSE programs.) The federal Office of Child Support Enforcement (OCSE) Office of Audit performs data reliability audits to evaluate the completeness, accuracy, security, and reliability of data reported and produced by state reporting systems. The audits help ensure that incentives under the Child Support Performance and Incentives Act of 1998 (P.L. 105-200) are earned and paid only on the basis of verifiable data and that the incentive payments system is fair and equitable. If an audit determines that a state’s data are not complete and reliable for a given performance measure, the state receives zero payments for that measure.

program. This means that tribal CSE program data do not include state CSE data nor information on cases connected with the other 519 federally recognized tribal governments.

**Table 1** presents a summary of tribal CSE program data for the seven-year period from FY2004 through FY2010.<sup>93</sup> The table only provides information on comprehensive tribal CSE programs. During the years FY2004-FY2006, there were nine comprehensive tribal CSE programs; in FY2007, there were 12 comprehensive tribal CSE programs; in FY2008, there were 32 comprehensive tribal CSE programs; in FY2009, there were 36 comprehensive tribal CSE programs; and in FY2010, there were 38 comprehensive tribal CSE programs (see **Table B-1**). Child support payments collected by tribes or tribal organizations increased from \$14.5 million in FY2004 to \$31.4 million in FY2010 (an increase of about 117%). The number of children whose paternity was established (or acknowledged) via the tribal CSE program increased by 99%, from 13,746 in FY2004 to 27,355 in FY2010. In FY2007, the number of paternities established represented about 96% of all tribal CSE cases in which a child's biological father had not been legally identified.<sup>94</sup> In FY2010, although the number of paternities established increased, the comparable percentage was 93%. The number of child support orders/obligations established increased by 122%, from 9,767 in FY2004 to 21,649 in FY2010. Tribal CSE program expenditures also increased substantially, from \$9.1 million in FY2004 to \$31.2 million in FY2010 (a 241% increase). However, during that same period, the tribal CSE program caseload only increased 39%, from 27,750 cases in FY2004 to 38,642 cases in FY2010.

**Table 1** also shows that during the period FY2004-FY2010, the tribal CSE program increased the amount it collected on current child support obligations by 51%, from \$12.9 million in FY2004 to \$19.5 million in FY2010. During this same period, the tribal CSE program also increased the amount it collected on past-due child support obligations by 164%, from \$3.5 million to \$9.2 million. Nonetheless, in FY2010, \$220.6 million in child support obligations was owed to families receiving tribal CSE services, but only \$28.7 million was paid.<sup>95</sup> This means that in FY2010, the tribal CSE program only collected 13% of the child support obligations for which it had responsibility.<sup>96</sup> If current child support collections are examined separately, **Table 1** indicates that the tribal CSE program collected 48% of all current obligations in FY2010.<sup>97</sup> If collections on past-due child support obligations (i.e., arrearages) are examined separately, **Table**

---

<sup>93</sup> FY2004 represents the first year for which complete tribal CSE data are available and FY2010 represents the most recent data available.

<sup>94</sup> Legally identifying a child's father is a prerequisite for obtaining a child support order. If there is no child support order, there is no legal financial obligation.

<sup>95</sup> The \$28.7 million figure is substantially larger than the \$27.1 million mentioned earlier and shown in the first row of **Table 1** as distributed child support collections. These data come from two different sources (forms OCSE34A and OCSE75), which have different reporting criteria instructions. Other reasons for the difference could include the following factors: (1) child support forwarded to states is not included in the distributed tribal child support amount, (2) voluntary child support payments that were not part of a legally established child support order are not included in the distributed amount, and (3) interest payments and penalty payments on past-due child support (i.e., arrearages) are not included in the distributed amount.

<sup>96</sup> In FY2010, \$40.4 million in current support and \$180 million in past-due support was owed to families receiving tribal CSE services, but only \$19.5 million in current support and \$9.2 million in past-due support was actually paid to families. (See Table P-36 in the Office of Child Support Enforcement FY 2010 Preliminary Report.)

<sup>97</sup> In its first year of full implementation (FY2004), the tribal CSE program collected more current child support obligations than were currently due. It collected \$12.9 million in current child support obligations in FY2004 when only \$9.1 million in current child support obligations were actually owed. If these data are accurate, it would indicate that noncustodial parents in the tribal CSE program paid 42% more than they were actually required to pay. CSE administrators have suggested that there probably were some reporting errors in FY2004.

**1** indicates that the tribal CSE program only collected 5% of child support arrearage payments in FY2010. The tribal CSE program closely parallels the state CSE program in its inability to collect a substantial portion of past-due child support obligations (i.e., child support arrearages).<sup>98</sup> If child support is not paid in the month in which it is due it is considered past-due child support. Thus, the past-due child support shown in the table for FY2010 could be from FY2010 or any of the prior years. In other words, the past-due child support shown for FY2010 could have accrued in any of the years shown in the table or even in earlier years. This means that much of the child support arrearages that are currently part of the tribal CSE program could have been transferred from a state CSE program to the tribal CSE program. Indeed, **Table 1** shows that in FY2004 (the first year in which comprehensive data are available) child support arrearages were already at nearly \$50 million.

The last row of **Table 1** shows a measure of CSE program effectiveness, obtained by dividing total tribal CSE collections by total tribal CSE expenditures (costs). This measure is sometimes referred to as the collections-to-costs ratio. The table shows that in FY2010, \$1.01 was collected from noncustodial parents for the financial support of their children for each dollar spent on tribal CSE programs.<sup>99</sup> Although there was a decline in this measure over the FY2004-FY2010 period, this could be attributed to the fact that the program was just getting underway in FY2004.

---

<sup>98</sup> For state CSE programs, in FY2010, \$142.9 billion in child support obligations (\$32.6 billion in current support and \$110.3 billion in past-due support) was owed to families receiving CSE services, but only \$27.6 billion was paid (\$20.2 billion current, \$7.4 billion past-due). In FY2010, the federal/ state CSE program collected only 19% of child support obligations for which it had responsibility. If current child support collections are examined separately, the state CSE programs collected about 62% of all current obligations in FY2010. If child support arrearages are examined separately, the state CSE programs collected about 7% of child support arrearage payments in FY2010.

<sup>99</sup> With regard to state CSE programs, in FY2010, \$4.88 was collected from noncustodial parents for the financial support of their children for each dollar spent on state CSE programs.

**Table I. Tribal CSE Program Financial and Statistical Data, FY2004-FY2010**

	<b>2004</b>	<b>2005</b>	<b>2006</b>	<b>2007</b>	<b>2008</b>	<b>2009</b>	<b>2010</b>	<b>Percent Change, FY2004-FY2010</b>

Total Collections Per Dollar of Expenditures	\$1.59	\$1.33	\$1.23	\$1.32	\$1.30	\$0.94	\$1.01	-36.6%

**Source:** Congressional Research Service, based on data from the Office of Child Support Enforcement, Department of Health and Human Services.

**Notes:** Most of the data in this table are from the OCSE FY2010 Preliminary Report, Table P-36. Figures for “Collections Per Dollar of Expenditures” (i.e., the last row of the table) were obtained by dividing total collections (shown in the third row) by expenditures.

NA—not available.

- a. This figure is smaller than the sum of the figures labeled “Current Child Support Collected and Distributed” and “ Past-Due Child Support Collected and Distributed” primarily because the figures are taken from two different reporting forms that have different reporting criteria instructions. (This figure comes from form OCSE34A and the other figures mentioned come from form OCSE75.)
- b. Some of this amount may have been owed to the custodial parent when the state-based cases were transferred to the tribe.

**Figure 2** graphically shows the amount of child support collected by the tribal CSE program for the period FY2004-FY2010. It also shows the amount of expenditures associated with the tribal CSE program. As mentioned earlier, one measure of a program’s cost-effectiveness is often portrayed as the relationship of benefits to costs. As shown in **Table 1**, in FY2004, the tribal CSE program collected \$1.59 for each dollar that it spent. By FY2010, the collections-to-expenditures rate had dropped to \$1.01. A reason for this occurrence might be that tribal CSE programs that are just getting underway are included in the data calculations. Another reason might be that the data may be inconsistent and/or unreliable across tribes. Nonetheless, this trend of declining collections to expenditures differs from that seen in the federal/state CSE program. Except for FY2009, the federal/state CSE program has never, over any five-year period in its history (FY1978-FY2010), shown a decrease in collections to costs.<sup>100</sup>

**Figure 2. Tribal CSE Program: Collections and Expenditures, FY2004-FY2010**

**Source:** Congressional Research Service, based on data from the Office of Child Support Enforcement, Department of Health and Human Services.

<sup>100</sup> From FY1978 through FY2010, in the state CSE program, both child support collections and expenditures increased with each succeeding year, except for FY2009. (Source: Annual CSE data reports, various years.) FY2009 CSE state data show a fall in collections. FY2010 CSE state collections were higher than FY2009 collections, but slightly lower than FY2008 collections.

The data also show that expenditures per case in the tribal CSE program grew over the seven-year period FY2004-FY2010. Expenditures per case increased by 145% during this period, from \$329 in FY2004 to nearly \$807 in FY2010 (see **Table 2**). Collections per case also increased during the period, but not as much. Collections per case increased by about 56%, from \$522 in FY2004 to \$812 in FY2010.<sup>101</sup> As mentioned earlier, tribal CSE cases increased by 39% over the FY2004-FY2010 period.

Although the two measures, expenditures per case and collections per case (see **Table 2**), help illuminate the tribal CSE program, they are only averages and do not accurately reflect what individual families receive. As noted earlier, Census Bureau data pertaining to child support receipt do disaggregate by race, but AIAN are included in the “other race” category. OCSE data do not provide information on actual cases with collections for the tribal CSE program. Nevertheless, we do know that \$192 million of child support owed to tribal members went unpaid in FY2010, which is 87% of the amount of money that the tribes and tribal organizations were supposed to collect on behalf of Native American children.

**Table 2. Tribal CSE Program, Expenditures and Collections Per Case, FY2004-FY2010**

	Collections/Caseload	Expenditures/Caseload
2004	\$522.12	\$329.00
2005	\$510.11	\$382.44
2006	\$574.32	\$466.73
2007	\$656.03	\$495.84
2008	\$790.40	\$607.12
2009	\$690.99	\$736.19
2010	\$812.23	\$806.64

**Source:** Congressional Research Service, based on data from the Office of Child Support Enforcement, Department of Health and Human Services.

**Table 3** and **Table A-6** show that there were wide differences among the tribes in how much child support was collected for each dollar spent on the tribal CSE program, ranging from 2 cents in the Chippewa Cree tribe to \$2.60 in the Forest County Potawatomi tribe.<sup>102</sup>

**Table 3** presents tribal CSE program data by tribe (for the 38 comprehensive tribal CSE programs) for FY2010. It shows tribal CSE collections (distributed), expenditures, and caseload data. It also displays the number of paternities and child support orders established by the tribe or tribal organization, and the collections-to-expenditures ratio for each tribe or tribal organization. The table indicates that the Navajo Nation ranked highest in five of the six categories shown. The Navajo Nation collected the most child support payments, had the highest child support expenditures, had the largest child support caseload, and established the most paternities and

<sup>101</sup> The “expenditures per case” data were obtained by dividing the child support expenditures (displayed in **Table 1**) by the child support caseload (also displayed in **Table 1**). The “collections per case” data were obtained by dividing the child support collections (displayed in the first row of **Table 1**) by the child support caseload.

<sup>102</sup> As noted in **Table 1**, the average amount collected for each \$1 spent for all of the tribes with CSE programs was \$0.87 in FY2010.

child support orders. The Navajo Nation was one of the first tribes to receive direct federal CSE funding. It has had a comprehensive CSE program since FY2002. The Forest County Potawatomi tribe had the best collections-to-expenditures ratio in FY2010, three times higher than the average (\$0.87) for all tribes. Like the Navajo Nation, the Forest County Potawatomi tribe has had a comprehensive CSE program since FY2002. (See Tables A-1 through A-6 in **Appendix A** for a ranking of the tribes and tribal organizations with respect to each of the six program/performance indicators.) The Navajo Nation is the largest Indian tribe in the United States, with about 12% of the U.S. tribal enrollment. Although the Navajo Nation is not among the wealthiest tribes per capita, it appears to have a very effective CSE administrative structure. In contrast, the Forest County Potawatomi tribe is a much smaller tribe but appears to be relatively wealthy<sup>103</sup> and seems also to have an effective CSE administration. (See **Table C-1** for enrollment and population data on these tribes.)

**Table 3. Tribal CSE Summary Data by Tribe, FY2010**

	Distributed Collections	Expenditures	Caseload	Paternities Established	Orders Established	Collections/Expenditures <sup>a</sup>
Cherokee Nation	\$4,401,320	\$1,757,935	2,638	3,724	2,594	\$2.50

**Source:** Congressional Research Service, based on data from the Office of Child Support Enforcement, Department of Health and Human Services.

**Notes:** According to OCSE, data reporting by the tribes has been an issue for three reasons: (1) reporting methods before 2006 were not clear, (2) in 2006, the reporting form changed again and what was required was

not clear; and (3) until one of the tribes developed an MS Access-based case management system, all data were calculated manually (most tribes now use the Access system).

NA—not available. (All of the tribes for which data are not available are tribes that began operating “comprehensive” tribal CSE programs in FY2008, FY2009, or FY2010. )

- a. This column shows distributed tribal CSE collections divided by tribal CSE expenditures. The total differs from **Table I** because it does not include tribal CSE collections that were forwarded to states.

It should be noted that during the formative years of any program, the meaning of program indicators may not be clear-cut. For example, with respect to tribal CSE programs, a large caseload may mean that the program is doing an excellent job of informing potential recipients of the program, or it may mean that there are reasons external to the program that are contributing to the high number of cases, such as high divorce rates, high rates of single-parent families, high rates of nonmarital childbearing, or high rates of nonpayment of child support. Similarly, high expenditures may mean that the program is providing a range of services to ensure child support collections, or that it has increased program staff to facilitate outreach and program administration, or that the families it is servicing require a lot of assistance (e.g., location services, paternity establishment, order establishment). Thus, although the tables are provided to shed some light on how individual tribal CSE programs are doing, it is probably unwise to draw conclusions from the data or make broad generalizations about tribal CSE programs. The effectiveness of tribal CSE programs may prove to be even more difficult to determine and evaluate than state CSE programs.

## Issues

Nearly eight years after tribes officially became part of the CSE program with the enactment of the 1996 welfare reform law, final regulations<sup>104</sup> were established to implement direct funding to Indian tribes and tribal organizations for tribal CSE programs. The final regulations require that all child support agencies accept applications for service from anyone and require that the tribal CSE agency provides appropriate services. This includes taking all applications, opening a case for each, determining what services are needed and may be provided by the tribal CSE agency, and providing all of those services required by tribal CSE regulations. The tribe must provide, at a minimum, basic assistance, such as location, preparation of documents for intergovernmental processing, and case monitoring and distribution of collections forwarded from another jurisdiction. There may be circumstances where the tribal agency’s only appropriate service will be to request assistance from another tribal or state CSE program with the legal authority to take actions on the case. In these and other such instances, states and tribes must work together to ensure that families receive the child support that they deserve.<sup>105</sup>

Although tribes and tribal organizations can now operate CSE programs, many problems have yet to be resolved. Even though there are rules related to whether a state or a tribe has jurisdiction over certain cases, in some instances there is concurrent jurisdiction and in some instances the complexity of the case blurs jurisdictional lines. Although federal regulations clarify that establishment of paternity under tribal CSE programs does not infer tribal enrollment or

---

<sup>104</sup> The final rule pertaining to tribal CSE programs is found in *Federal Register*, vol. 69, no. 61, March 30, 2004. The federal regulations are codified at 45 C.F.R. § 309.

<sup>105</sup> U.S. Department of Health and Human Services, Office of Child Support Enforcement, Tribal Policy Interpretation Questions, PIQT-05-02, April 26, 2005.

membership, paternity is inextricably linked to tribal membership. Many tribes view tribal membership as a political and cultural issue and thereby do not want to rely on scientific technology to confer tribal membership. A major difference between state CSE programs and tribal CSE programs is that tribal CSE programs can authorize the use of noncash payments to satisfy child support orders. Some observers are concerned that requiring the tribe to place a dollar value on each type of noncash payment may prove to be administratively cumbersome and costly. They argue that it is hard to predict and include a dollar amount for all of the kinds of noncash payments that members of the tribe may want to use to satisfy their child support obligations.

Some child advocates are concerned that children who receive tribal CSE services may be less likely to receive the child support to which they are entitled than their counterparts who receive state CSE services, because tribal CSE programs do not have access to the vast array of state collection methods. Although nonpayment of child support is likely to be a perennial issue, especially for low-income noncustodial parents, some observers assert that tribal CSE programs that determine realistic and appropriate child support orders from the outset may improve the long-term success of their programs. In addition, some observers are concerned that unequal resources may result in children within a tribes' jurisdiction not getting the child support they are due, while others contend that the individualized approach used by tribes may counterbalance reduced and/or inadequate resources. This section examines the issues mentioned above.

## **Jurisdictional Matters**

Indian tribes within the boundaries of the United States are considered “domestic dependent nations” under federal law, and tribal sovereignty and jurisdiction has been viewed by the federal government as limited. In general, tribal sovereignty applies in matters that affect tribe members who live on the tribe’s reservation. Census data indicate that about 67% of AIAN, as defined by race, live outside reservations and other Census-defined Indian areas.<sup>106</sup>

When all parties to a domestic relations case are not members of the tribe or any federally recognized Indian tribe, the tribe may lack jurisdiction.<sup>107</sup> Whether a tribal court or state court has jurisdiction may be crucial in paternity cases and in child support matters.<sup>108</sup> Most states do not have criminal or civil jurisdiction over Indian tribal members on their reservations. P.L. 83-280 (usually referred to as Public Law 280), however, was enacted in 1953 and the affected states received criminal and civil jurisdiction over Indians on some or all reservations within their boundaries. There are six mandatory Public Law 280 states (California, Minnesota, Nebraska, Oregon, Wisconsin, and Alaska), where Public Law 280 required state jurisdiction (with some exceptions); and there are 10 optional Public Law 280 states (Nevada, Florida, Idaho, Iowa,

<sup>107</sup> The Supreme Court, in *Montana v. United States*, 450 U.S.544 (1981), distinguished between retained tribal sovereignty and that which has been divested, emphasizing that a tribe’s sovereign power is strongest when it is being exercised with respect to tribal members on tribal lands. The extent to which a tribe may exercise civil jurisdiction over non-members involves a number of factors. Divestment of tribal authority may occur by virtue of a treaty or federal statute, or as a result of the status of Indian tribes as being subject to the overriding sovereignty of the United States.

<sup>108</sup> U.S. Department of Health and Human Services, Office of Child Support Enforcement, “Tribal and State Jurisdiction to Establish and Enforce Child Support,” March 12, 2007, p. 59, <http://www.acf.hhs.gov/programs/cse/pol/IM/2007/im-07-03.htm>.

Washington, South Dakota, Montana, North Dakota, Arizona and Utah), which chose to acquire various jurisdictional powers under Public Law 280's authorization. Public Law 280 provides that a state can exert jurisdiction over individual tribal members. This jurisdiction is concurrent with that of the tribe.<sup>109</sup> In general, a state with complete Public Law 280 civil jurisdiction has jurisdiction over domestic relations actions, to which Indians are parties, and which arise in Indian country. In the absence of Public Law 280 jurisdiction, if both parents are enrolled members of the same tribe and live in Indian country, it is generally held that the tribal court has exclusive jurisdiction.<sup>110</sup>

Although tribal courts have exclusive jurisdiction (in the absence of Public Law 280) over parentage and child support matters where both parents are from the same tribe and reside on the tribe's reservation,<sup>111</sup> there are many circumstances in which that is not the case. The following is a list of several examples that would raise the issue of tribal court versus state court jurisdiction: (1) Indian mother and non-Indian father, (2) non-Indian mother and Indian father, (3) Indian mother who is a member of the tribe and an Indian father who is not a member of the tribe, or (4) Indian mother who is not a member of the tribe and an Indian father who is a member of the tribe.<sup>112</sup>

Concurrent jurisdiction does not necessarily resolve conflict. For example, if there is concurrent jurisdiction under Public Law 280, such as a case in which one party is a tribal member who resides on the reservation and the other party, who may or may not be a tribal member, resides off the reservation, it is possible that a state and a tribe may have competing interests. For example, while the tribe has a significant interest in establishing paternity in such cases, there also could be state concerns, such as the application for public assistance or CSE services. Also, tribal courts might not use genetic testing for paternity establishment to the same extent as state courts. Tribal courts are also less likely to recognize presumptions of paternity, and they historically have given limited recognition to the marriage presumption. Balancing state interests and tribal interests is an important consideration in such cases.<sup>113</sup>

Native American children who receive TANF benefits are another example in which state court versus tribal court jurisdictional issues could arise. Some courts would characterize the state as a non-Indian party and analyze jurisdiction accordingly. Other courts could characterize the state as

<sup>110</sup> U.S. Department of Health and Human Services, Office of Child Support Enforcement, "Tribal and State Jurisdiction to Establish and Enforce Child Support," March 12, 2007, p. 60-61, <http://www.acf.hhs.gov/programs/cse/pol/IM/2007/im-07-03.htm>.

<sup>111</sup> A valid exercise of tribal court jurisdiction requires valid service of process. When the civil action is being heard by a tribal court, service should comply with the relevant tribal code. Most tribal codes allow personal service and/or service by registered mail, return receipt requested. The tribal code may also specify who may serve process. For example, in some tribes service of process may be performed by any person who is not a party and who is at least 18 years old. In other tribes, the court may require service of process by a tribal police officer or other person specially appointed by the court. (Source: U.S. Department of Health and Human Services, Office of Child Support Enforcement, "Tribal and State Jurisdiction to Establish and Enforce Child Support," March 12, 2007, p. 43, <http://www.acf.hhs.gov/programs/cse/pol/IM/2007/im-07-03.htm>.)

an Indian because it derives its interest in the child support actions from the Indian parent's assignment of child support rights.<sup>114</sup>

Even in mandatory Public Law 280 states, conflict over jurisdiction may occur. On January 19, 2010, the Central Council of the Tlingit and Haida Indian Tribes filed a lawsuit against the state of Alaska's Child Support Services Division (CSSD) for its refusal to recognize the tribe's child support orders. The state of Alaska and the Tlingit and Haida Tribes disagree on the underlying jurisdictional issue of the tribal court's authority to issue its own child support orders. CSSD provides all necessary services, such as the Permanent Fund Dividend (PFD)<sup>115</sup> intercept, to all "transferred" cases, but refuses to provide services when the underlying order is based upon a tribal court child support order. According to the Central Council of the Tlingit and Haida Indian Tribes,

This lawsuit will allow both the State and Tribe to resolve these underlying jurisdictional issues and ensure that Native children and families receive the child support services necessary to meet families' basic needs. It will also address CSSD's refusal to follow Alaska's Uniform Interstate Family Support Act (UIFSA) to provide interstate services for Central Council's tribal child support orders.<sup>116</sup>

In October 2011, the Juneau Superior Court ruled in favor of the tribe<sup>117</sup> and agreed that the tribe has jurisdiction over child support when the case involves a child that is enrolled or is eligible for enrollment with the tribe.<sup>118</sup>

Some observers contend that states and tribes must avoid or set aside long-standing disputes over land and jurisdiction so that they can better serve custodial parents in obtaining the CSE services to which their children are entitled.

Jurisdictional issues between states and Indian tribes can be very complex, and even cases that seem straightforward may have twists and turns. For instance, even though the state of Wisconsin is a Public Law 280 state, which means that the state has jurisdiction over members of Indian tribes even if they reside on the reservation, the Menominee Reservation is excepted from Wisconsin's Public Law 280 jurisdiction.<sup>119</sup>

## **Paternity Establishment**

Legally identifying the father is a prerequisite for obtaining a child support order. Generally, if a child is born to a married couple, the wife's husband is presumed to be the baby's father. In the United States, nonmarital births are widespread, touching families of varying income class, race, ethnicity, and geographic area. In 2010, 40.8% of the 4.0 million U.S. births were to unmarried

women. In that same year, 65.6% of the approximately 47,000 births to American Indian or Alaska Native women, as identified by race, were nonmarital births.<sup>120</sup>

In cases where a child is born to unmarried parents, paternity must be established or acknowledged. Tribes and tribal organizations allow the establishment of paternity through a variety of methods, including through voluntary acknowledgement, through the tribal courts, through the state courts, through an administrative process, by default, by stipulation, and through tribal ceremony for adoptions.<sup>121</sup>

Most experts agree that use of highly reliable DNA tests greatly increases the likelihood of correct identification of putative fathers. DNA tests can be used either to exclude unlikely fathers or to establish a high likelihood that a given man is the father of a child. DNA profiling allows for direct examination of the genetic material that a child inherited from his or her biological parents.<sup>122</sup> During the testing process, the genetic characteristics of a child are first compared to those of his or her mother. The characteristics that cannot be found in the mother must have been inherited from the biological father. If the tested man does not contain the genetic characteristics necessary to be the biological father of the child, he is excluded.<sup>123</sup> If the DNA of the tested man does contain those genetic characteristics, then the man cannot be excluded and the probability that the tested man is the true biological father can be calculated.<sup>124</sup>

Many tribes and tribal organizations view paternity differently than states. Although federal regulations clarify that establishment of paternity under tribal CSE programs does not infer tribal enrollment or membership, paternity may be inextricably linked to tribal membership. Thus, even though DNA testing is commonly used by tribes to establish paternity, many tribes view tribal membership as a political and cultural issue and thereby do not want to rely solely on scientific technology to confer tribal membership.

Others note that many people view paternity tests as an affront to their integrity and an indication of a lack of trust. This situation is exacerbated in the case of an older child. According to some focus group discussants, for many couples, once one of the partners or alleged partners indicates that a paternity test is needed, any future chance for cooperative parenting is greatly diminished because of lingering animosity over the father not stepping forward and meeting his financial

---

<sup>120</sup> The percentage of nonmarital births was 17.0% for Asian or Pacific Islander women (247,000 births), 29.0% for white women (about 2.2 million births), 53.3% for Hispanic women (946,000 births), and 72.5% for black women (589,000 births). (Source: U.S. Department of Health and Human Services, National Center for Health Statistics, "Births: Preliminary Data for 2010," *National Vital Statistics Reports*, vol. 60, no. 2, November 2011.)

<sup>121</sup> Office of Child Support Enforcement, "Tribal Child Support Enforcement Systems Workgroup, Session III Joint Application Development Final Report," October 2005.

<sup>122</sup> Since DNA is present in all cells of the body, DNA testing can be done on a specimen collected by gently rubbing the inside of the cheek with a cotton swab (i.e., the buccal swab method).

<sup>123</sup> Negative genetic test results are usually considered conclusive evidence that the alleged father is not the biological father. A negative genetic test result almost always results in a dismissal of all claims for child support.

<sup>124</sup> When a man is not excluded, the probability that he is indeed the father of the child can reach as high as 99.99%. The exact percentage used to determine paternity varies among tribes. When tests indicate a high probability of paternity, a rebuttable presumption arises and it becomes the man's responsibility to disprove the findings. If he has not challenged the results within the number of days specified in tribal procedures (and the genetic test results reach the threshold of probability established by the tribe), the tribe may seek a conclusive determination of paternity. (Source: U.S. Department of Health and Human Services, Office of Child Support Enforcement, "OCSE Training Courses for Tribal IV-D Programs—Paternity Module," <http://www.acf.hhs.gov/programs/cse/resources/tribal/training/>.)

responsibility or the mother not being honest about her fidelity or use of birth control.<sup>125</sup> Although the discussants mentioned above were talking about problems with and ways to improve state CSE programs, it is not unrealistic to infer that clients of tribal CSE programs may hold similar negative views about the implications of paternity testing.

Although tribes and tribal organizations must give full faith and credit to child support orders, they do not have to recognize stand-alone paternity orders.<sup>126</sup> Some commentators contend that tribes and tribal organizations should not be given so much discretion with regard to establishing paternity. They maintain that the advances in science and technology make paternity establishment straightforward and relatively inexpensive and argue that a tribe's reluctance to use DNA testing stems from its disinclination to confer membership on more persons and belies a financial motivation in that some tribes might not want to share revenue from casinos, oil and water rights, etc., with more members.<sup>127</sup>

Moreover, some persons argue that DNA testing to establish paternity is different from DNA testing that tries to prove whether or not a person is a member of a tribe. They assert that DNA paternity testing is almost infallible (with probability of paternity values reaching as high as 99.999%). They also point out that federal regulations more than adequately protect the status of tribes by stipulating that establishment of paternity under tribal CSE programs does not infer tribal enrollment or membership.<sup>128</sup>

Federal CSE law requires that in the case of unmarried parents, the father's name shall not appear on the birth certificate unless he has signed a voluntary acknowledgment of paternity or a court has issued an adjudication of paternity; no such provision exists for tribal CSE programs. This means that in a case in which a tribe or tribal organization has jurisdiction, if a woman puts a man's name on the birth certificate of her child and he does not contest the paternity (perhaps because he does not know about it), the child could be deemed to be the child of the man whose name is on the birth certificate—regardless of whether the name is on the birth certificate due to a paternity adjudication, a default paternity order, or a paternity acknowledgment, and regardless of whether the man is the child's biological father.<sup>129</sup>

<sup>128</sup> It is interesting that the biological child of a woman who is a member of a tribe may not automatically be a member of his or her mother's tribe. Tribal enrollment requirements preserve the unique character and traditions of each tribe. The tribes establish membership criteria based on shared customs, traditions, language, and tribal blood. Tribal enrollment criteria are set forth in tribal constitutions, articles of incorporation, or ordinances. The criteria vary from tribe to tribe, so uniform membership requirements do not exist. Two common requirements for membership are lineal descent from someone named on the tribe's base roll or relationship to a tribal member who descended from someone named on the base roll. (A "base roll" is the original list of members as designated in a tribal constitution or other document specifying enrollment criteria.) Other conditions such as tribal blood quantum, tribal residency, or continued contact with the tribe are common. (Source: <http://www.doi.gov/archive/enrollment.html#Requirements>).

<sup>129</sup> According to the National Tribal Child Support Association, although some tribes accept/acknowledge default orders, most do not ([http://www.supporttribalchildren.org/NTCSA\\_TCS%20Info\\_Resource%20Guide\\_2009\\_May.pdf](http://www.supporttribalchildren.org/NTCSA_TCS%20Info_Resource%20Guide_2009_May.pdf)).

## **Child Support Enforcement Methods**

Federal regulations require that tribes include in their tribal CSE plans tribal law, code, or regulations that describe the types of collection/enforcement actions the tribe can use. The only collection/enforcement method mandated (by federal regulations) for tribes and tribal organizations is income withholding. For the states, income withholding is by far the most effective method of obtaining child support payments. According to OCSE data, about 67% of child support collected through the state CSE agencies is collected via income withholding. However, if the noncustodial parent does not have a job or is self-employed, then income withholding is not applicable.

Federal law requires that states enact state laws that authorize the use of the following collection/enforcement methods: income withholding; intercept of federal and state income tax refunds; intercept of unemployment compensation; liens against property; reporting child support obligations to credit bureaus; intercept of lottery winnings; sending insurance settlement information to CSE agencies; authority to withhold or suspend driver's licenses, professional licenses, and recreational and sporting licenses of persons who owe past-due child support; and authority to seize assets of debtor parents held by public or private retirement funds and financial institutions. Moreover, federal law authorizes the Secretary of State to deny, revoke, or restrict passports of debtor parents. All jurisdictions also have civil or criminal contempt-of-court procedures and criminal nonsupport laws. In addition, federal criminal penalties may be imposed in certain cases. Federal law also provides for international enforcement of child support. Some tribes argue that allowing tribes to operate CSE programs but denying them access to the array of enforcement methods that are available to states results in inequities in service that adversely impact Native American children.

Even though tribes do not have access to the vast array of child support enforcement/collection tools that are available to the states, many tribes have been successful in implementing new and innovative enforcement techniques, such as elders' panels, attachment of per capita payments, attachment of gaming winnings, and personal improvement mandates. (All enforcement techniques must first be approved by the tribe's governing body.)

One of the child support collection methods that has been mentioned as a tool that would greatly benefit tribes is the federal income tax refund offset program.<sup>130</sup> According to a representative of the National Tribal Child Support Association, many noncustodial parents of Native American children are reluctant to use their federal income tax refunds to pay past-due child support but don't mind if their refunds are withheld from them to pay past-due child support. Some noncustodial parents view the refund as extra money, and while they might not use it to pay child support on their own, they recognize as legitimate the reason for withholding it from them.<sup>131</sup> Thus, some child advocates argue that the federal income tax refund offset is a very important enforcement tool that should be available to the tribes. Under current law, tribes don't have access to the federal income tax refund and because of jurisdictional boundaries, states can not "serve"

---

<sup>130</sup> According to an HHS document, direct access for Indian tribes to the Federal Income Tax Refund Offset program and the Federal Parent Locator Service could result in about \$100 million in additional collections to tribal families over a five-year period. (Source: HHS Justification of Estimates for Appropriations Committees, Administration for Children and Families, FY2004, p. B-14.)

<sup>131</sup> Clifton Adcock, "Tribes Seek State Tools for Child Support," Cherokee Phoenix, <http://www.cherokeephox.org/3855/Article.aspx>.

(i.e., deliver a legal summons) an individual in a child support case if that person is on Indian land. According to the National Tribal Child Support Association, several tribes are in the process of negotiating contracts for states to access the federal income tax refund offset on behalf of Indian children.<sup>132</sup> In order for tribes to have direct access to the federal income tax refund offset, Congress would have to pass legislation that specifically provided access to tribes and tribal organizations.

Tribes do not have access to most of the state child support collection tools, but tribes, unlike states, have the authority to allow noncustodial parents to use in-kind payments instead of cash to satisfy child support debt.<sup>133</sup> Many tribal CSE administrators view this as a great advantage, especially because many of the noncustodial parents associated with their caseloads are individuals with low-income and/or barriers to employment. The use of in-kind payments allows noncustodial parents of Indian children to reduce or eliminate their monthly child support obligation by providing a service to the custodial parent. Federal regulations require that child support orders clearly include a specific dollar amount reflecting the child support obligation. For example, a tribal CSE order could provide that a noncustodial parent owes \$200 a month in current support, which may be satisfied with the provision of firewood suitable for home heating to the custodial parent and child. The child support order could provide that a cord of firewood has a specific dollar value of \$100 based on the prevailing market. Therefore, the noncustodial parent would satisfy his or her child support obligation by providing two cords of firewood every month. The valuation of noncash resources is the responsibility of the tribe.<sup>134</sup> Other examples of in-kind payments include food such as salmon and buffalo, and ceremonial regalia.

Some tribal CSE administrators view in-kind payments as an effective and innovative enforcement strategy that encourages responsible parenting (by allowing noncustodial parents with little income to provide for their children with noncash payments/services).<sup>135</sup> Nonetheless, there is also the concern that requiring a tribe to place a dollar value on each type of noncash payment may prove administratively cumbersome and costly. Some observers argue that it is hard to predict and include in a tribal CSE plan all of the kinds of noncash payments that tribal members may want to use to satisfy their child support obligations. Others insist that one of the major roadblocks for tribal CSE programs is the lack of access to state locate resources and state enforcement tools.<sup>136</sup>

---

<sup>132</sup> *Ibid.*

<sup>133</sup> Although many custodial parents in state CSE programs receive some form of noncash support from the noncustodial parent, this noncash support does not reduce their child support obligation. According to Census data, 61% of all custodial parents received some noncash support from the noncustodial parent in 2005. The most common type of noncash support was gifts for birthdays, holidays, or other occasions (58%), followed by clothes (39%), food or groceries (29%), medical expenses other than health insurance (19%), and full or partial payments for child care or summer camp (11%). ## Nonpayment Problems

As discussed earlier, in FY2010 the tribal CSE program collected only 13% of the child support obligations for which it had responsibility (i.e., 48% of current child support obligations and 5% of child support arrearage payments). Nonpayment of child support is a major problem for both tribal and state CSE programs. Some commentators contend that certain CSE procedures such as the use of default judgments and unrealistically high child support orders are major contributors to the problem of nonpayment of child support.

If a noncustodial parent gets a notice or a summons about child support or paternity establishment but does not appear in court at the stipulated date and time, the court can enter a child support order against the noncustodial parent by default. Although the majority of tribes with CSE programs do not acknowledge default judgments, some do. In cases where default judgments are recognized, if the noncustodial parent does not show up to tell his or her side of the story, the court can decide that the evidence against that person must be true. Thus, a “no show” by the noncustodial parent may result in the establishment of paternity and/or the establishment of a child support order, which will be effective whether or not the man in question is the actual father or whether or not the person in question has a job or a source of income. Some observers argue that the practice of using default judgments (i.e., judgments made in the absence of the alleged father), which is a practice of both tribal and state courts, has adversely affected many putative fathers who claim they are not the father of the child in question but, for whatever reason, did not show up in court to deny the allegations. Many analysts and observers maintain that the standards governing default judgments should balance the rights of the putative father to proper notice and the opportunity to be heard before paternity is established and a child support order is set against the right of the child to obtain a determination of paternity and support (on a timely basis) from a father who knowingly fails to appear in court.<sup>137</sup>

Although nonsupport can be partly attributed to the low incomes of many noncustodial parents, many commentators contend that unrealistically high child support orders and complicated time-consuming modification requirements exacerbate the problem. According to Census Bureau data, in 2009 27.3% of American Indians and Alaska Natives, as identified by race, had incomes below the poverty level, more than twice the rate of their white counterparts.<sup>138</sup> Setting child support orders at a level that exceeds a noncustodial parent’s ability to pay may in some cases decrease the amount of child support received by the custodial parent because of the noncustodial parent’s low income and/or because of the noncustodial parent’s contention that the CSE system is unfair.<sup>139</sup> In contrast, CSE policies, both tribal and state, that result in realistic child support orders, especially for persons at the lower end of the income scale, may result in more child support from low-income noncustodial parents. Some commentators contend that child support orders established by tribes are more realistic and fairer than those set by state guidelines. They argue that tribes are more aware of the circumstances of their people. There is agreement among policymakers and analysts that tribal CSE programs that establish realistic guidelines for child

support orders, allow swift and in some cases automatic modification of child support orders, and provide effective means of cooperating and coordinating with states and other tribal CSE programs will probably avoid many of the mistakes of state CSE programs.

Some noncustodial parents claim that the child support guidelines are inherently unfair because they do not account for “affordability.” They say that in many states and on many reservations, the basic living expenses of noncustodial parents, such as rent, food, and car payments, are often not considered a legitimate factor in determining the child support order. Many commentators agree that in many cases current levels of child support exceed what many middle and lower income noncustodial parents can afford to pay.

According to information for the Puyallup Tribe,<sup>140</sup> some tribes have significantly reduced child support debt that they claimed was inappropriately set by states or for which repayment would be impossible to achieve. However, other information indicates that some noncustodial parents who have appeared in tribal court to try to modify their child support order were told that the tribal court cannot modify their order because the custodial parent does not live on the reservation. They were told that the tribal court could not modify the underlying child support order, but it could make an “ability to pay” determination and thereby lower the amount to be paid to avoid a contempt of court ruling.<sup>141</sup>

## **Consistency of Tribal CSE Programs to Each Other and to State CSE Programs**

While it is generally agreed that state and tribal CSE programs should move in the same direction, it is also acknowledged that tribes are a sovereign entity and thus should have the authority to develop their own policies to achieve CSE program directives. It is also recognized that tribes are at the early stage of CSE program development and therefore need flexibility (as long as they remain within the parameters established in the law) to adjust their programs so as to better serve their clientele.

Although tribes have historically had some things in common, like their “boarding school” experience<sup>142</sup> and how they viewed nature and shared a holistic philosophy based on the premise

---

<sup>140</sup> The Puyallup Tribal Child Support Program indicated that it continues to facilitate the reduction of child support debt that was either inappropriately set by the state or for which repayment would be impossible due to changes in circumstances. It reports that such reductions total over \$2.3 million (Source: <http://www.puyallup-tribe.com/index.php?nav=programs&id=8>).

<sup>141</sup> North Dakota Supreme Court Committee on Tribal and State Court Affairs, April 12, 2002, <http://www.ndcourts.com/court/committees/tribstat/Minutes/MinutesApr2002.htm>.

<sup>142</sup> From the 1880s to the late 1970s, most Native American children attending BIA-funded schools were sent to BIA boarding schools, many for 12 years (since the late 1970s, most BIA students were in BIA day schools; see Paul Stuart, “Nations Within a Nation,” 1987, pp. 111-168). Many Native Americans describe the boarding school experience as horrendous, they say that the purpose of the schools was to strip them of their culture, they were told that their manner of speaking and dressing was bad and that the only way for them to succeed was to ignore their cultural heritage and assimilate into “American” culture. Many analysts contend that the negative psychological, emotional, social, and cultural impact of that boarding school experience continues to affect the relationship between tribes, the federal government, and states. (Sources: “The State of the Native Nations: Conditions Under U.S. Policies of Self-Determination,” the Harvard Project on American Indian Economic Development, May 2007, chapter 13, pp. 235-250; “Native America in the Twentieth Century: An Encyclopedia,” 1994, pp. 193-195.) In addition, some analysts contend that it is useful for state CSE administrators to recognize and not underestimate this history in their interactions with the tribes. (Source: Information obtained from seminar titled, “Government-to-Government Relations Between the Federal (continued...)”)

of the “circle of life,” they are also very diverse.<sup>143</sup> In most tribes, the father is highly respected but his role as a caregiver varies. In some tribes, the role of the father, like the mother, is to provide affection and support to his children while the uncles (and aunts) provide supervision and discipline. In other tribes, the father is very instrumental in assuring the cultural survival of the tribe, so he may have a very close relationship to his male children so that they will model his behavior and be prepared for leadership roles in the tribe. In other tribes, it is the grandparents who instill in the children the cultural mores of the tribe.<sup>144</sup> In many cases, the father’s role in a particular tribe will have an impact on how other tribe members, including mothers, view paternity establishment and child support. In some tribes, establishing paternity and child support orders may be viewed as reducing the harmony and unity of the tribe. In some tribes, child support enforcement techniques such as suspending various types of licenses of noncustodial parents who owe past-due child support may be viewed as harming fathers rather than helping children. Some observers contend that the potential variation among tribal CSE programs may adversely affect some Native American children. They maintain that finding the correct balance between historical tribal practices and the present-day needs of children is a crucial part of developing and operating a tribal CSE program that will ultimately be successful in providing Native American children with the child support to which they are entitled.

As indicated above, tribal CSE programs vary. Below is a summary of some of their differences, as identified in a document prepared by the National Tribal Child Support Association.

- Some tribes have adopted their own codes/laws but have incorporated their state’s child support statutes by reference, while other tribes have written their own codes/laws, procedures, and policies to govern their child support program.
- Most tribes have a court order process, some have CFR courts and some have tribal courts. The Navajo Nation has an administrative process.
- Some tribal CSE programs use the automated/computer systems of their corresponding state while others are not yet computerized and operate using manual systems.
- A few tribes have agreements with their individual states or counties for personal services on their reservation, although most do not.
- Administrative hearings may or may not be provided within the tribal programs.
- Some tribes will accept default orders (court or administrative), most will not.
- Some tribes will require paternity testing based on their tribal codes/laws if the original order does not meet certain criteria.<sup>145</sup>

<sup>145</sup> National Tribal Child Support Association, “Tribal IV-D Comprehensive Program Information, Key Differences and Similarities of Tribal Programs,” by Gloria Howard (Puyallup Tribal Child Support Program), November 2008.

As seen earlier in **Table 3**, there are big differences between tribal CSE programs in terms of caseloads, collections, and expenditures. The Navajo Nation is one of the tribes that is credited with operating an effective CSE program. The Navajo Nation has a collaborative relationship with Arizona, Utah, and New Mexico (the three states in which a majority of its members reside). The New Mexico Child Support Enforcement Division has had a formal cooperative agreement with the Navajo Nation since July 1, 1997.

The JPA [Joint Powers Agreement] between the State and the Navajo Nation provides the Navajo Nation with the ability to access the CSED's information system called the Child Support Enforcement System (CSES). The CSES information system is connected through the National New Hire Directory (NNHD), the Child Support Enforcement Network (CSENet) and the Electronic Parent Locator Network (EPLN) through the "Federal Case Registry" to the case registries of the 54 other states and territories, and 10 foreign nations. These connections are used for "locating" persons who owe child support and automatically "intercepting" their wage withholdings and other financial assets, and distributing it to the children and their custodial parents who are owed that child support. The CSES system cost the State of New Mexico \$30 million in development costs over several years. ... In order to accomplish the child support casework on Navajo Nation lands, two new regions (known as Region 8 and Region 9) were created within both the physical structure of the CSED and within the CSES system. In Region 8 and 9, employees of the Navajo Nation perform all aspects of child support enforcement. Cases are transferred in or out of Regions 8 and 9 as needed. This lends itself to cleaner casework that is done at a site closer to the custodial parent.<sup>146</sup>

Cooperative agreements are viewed as a productive way to enable states and tribes to better provide child support services to Indian children and to establish and enforce child support obligations and judgments. Cooperative agreements are a tool that allows states and tribes to work together as partners to provide culturally relevant CSE services, consistent with state and federal laws, that are based on tribal laws and customs. Under most cooperative agreements, cases in which all or some of the parties involved are tribe members living on the tribal reservation are referred by the state to the tribe to be processed in the tribal court.<sup>147</sup>

An integral part of state CSE programs is the incentive payment system. The incentive payment system is part of the CSE program's strategic plan that rewards states for working to achieve the goals and objectives of the program. Incentive payments, although small when compared to federal reimbursement payments for state and local CSE activities, are a very important component of the CSE financing structure. Together with the incentive payment system is a penalty system that imposes financial penalties on states that fail to meet certain performance levels. The purpose of the two complementary systems is to reward states for results while holding them accountable for poor performance, thereby motivating states to focus their efforts on providing vital CSE services.<sup>148</sup> Although tribal CSE programs do not have an incentive payment component, in an effort to monitor the effectiveness of tribal CSE programs, federal

<sup>148</sup> CRS Report RL34203, *Child Support Enforcement Program Incentive Payments: Background and Policy Issues*, by Carmen Solomon-Fears.

regulations<sup>149</sup> require a tribe to submit tribally determined performance targets for paternity establishment, child support order establishment, the amount of current child support collected, the amount of past-due child support to be collected and any other performance measures a tribe may want to submit. Tribes determine their own performance targets for each required measure and report the level of performance.<sup>150</sup> Some analysts surmise that these self-ascribed performance targets might be intentionally low and that such a system provides little incentive for a tribe to operate more efficiently or effectively, especially given that the federal government pays for at least 80% of the tribe's CSE program costs regardless of the effectiveness of the program. Others note that tribal CSE programs are much smaller than state CSE programs and that tribal CSE programs generally view their clients as part of their extended family/community and thus may be more internally motivated to operate effective programs.

## Conclusion

The precept “it takes a village to raise a child” could have had its foundation in Indian culture. For many years, the majority of Indian families maintained extended family relationships, usually living in groups that included the nuclear family plus grandparents, uncles, aunts, cousins, nephew, nieces, and other related individuals. Children were raised within this extended family network, which was responsible for their care, education, social well-being, cultural history, and traditions. This situation does not exist nearly as much today; Native American families, like those in many other population groups, have drifted apart over the past decades.<sup>151</sup>

Just as in the early years of the state CSE system when some noncustodial fathers moved from job to job or left the state where their children resided to avoid paying child support, it is surmised that some Native American noncustodial parents are residing on reservations to avoid paying child support. The principles of jurisdictional sovereignty, self-government, self-determination, and the government-to-government relationship that exists between tribes and the federal government were primary reasons why Congress provided direct federal funding of tribal CSE programs. It was meant to enhance tribal self-determination and to support Indian tribes and tribal organizations in their efforts to develop and implement their own programs to meet their particular and individual needs. Indian tribes were given the flexibility to design CSE programs that would meet the often complex and unique traditions and needs of Native American people.<sup>152</sup>

Nonetheless, new programs take time to mature. The state CSE program is now 35 years old, but during its early years, it faced many problems related to implementation, consistency of data, reporting of data, nonpayment of support, establishment of paternity, establishment of child support orders, distribution of support, and an antagonistic relationship with noncustodial parents. Many tribal CSE programs may also face these same problems, as well as problems related to the placement of the tribal CSE program within tribal government, reasonable salaries for workers,

<sup>152</sup> New Mexico Human Services Department, Program Assessments, *Native American Initiative Report*, January 2005.

staffing, confidentiality of data, distribution of required notices, lack of reciprocity in enforcement, service of process, and poor communication.

Perhaps the most important measure of the federal-state CSE program is its impact on overall national rates of paying child support. Both Congress and the American public view the CSE program as a means of improving the nation's system of ensuring that all parents who no longer live with their children continue to provide for their financial support. Although child support alone is generally not enough to raise family income above the poverty level, poor families who received child support but remained in poverty had their standard of living improved by the child support payments. Similarly, incomes and standards of living were improved by child support payments of non-poor families as well. On average, child support constitutes 17% of family income for households who receive it. Among poor households that receive it, child support constitutes about 40% of family income.<sup>153</sup>

Although the consistent and ongoing financial support of children by noncustodial parents is the main purpose of the CSE program, the program provides many other benefits to children. One such benefit, for many children, is the establishment of paternity. Social science research generally indicates that in most cases the social, psychological, emotional, and financial benefits of having one's father legally identified are irrefutable.<sup>154</sup> The research also overwhelmingly indicates that both parents are critical in building the self-esteem of their children and helping the children become self-sufficient, responsible members of society. Some commentators contend that except for their role as payers of child support, fathers generally have been given short shrift by federal, state, and local social welfare programs.<sup>155</sup> They assert that tribal CSE programs are in the position of being able to recognize, right from the start, the importance of fathers (who are usually the noncustodial parent) in the lives of their children and to participate in cooperative, respectful communication with fathers. It is generally agreed that an amenable relationship (as opposed to an antagonistic relationship) between noncustodial parents and the CSE agency is more likely to result in more noncustodial parents paying their child support obligations.<sup>156</sup> Some observers also encourage tribal CSE programs to coordinate with state programs such as CSE access and visitation programs, healthy marriage promotion programs, and responsible fatherhood programs to further foster productive relationships with fathers, with the ultimate goal of obtaining the child support to which Indian children are entitled.<sup>157</sup>

<sup>156</sup> William J. Doherty, Edward F. Kouneski, and Martha Farrell Erickson, "Responsible Fathering: An Overview and Conceptual Framework—Final Report," Washington, DC, U.S. Department of Health and Human Services, Administration for Children and Families, Center for Policy Research and Policy Studies (HHS-100-93-0012), September 1996.

<sup>157</sup> The Obama Administration's FY2013 budget acknowledges that healthy families need more than just financial support. It includes a proposal to provide \$580 million (over ten years) to support increased access and visitation services and integrates those services into the core CSE program (i.e., access and visitation expenditures would be matched at the general federal CSE matching rate of 66%).

It has been noted that there are 564 federally recognized tribal governments, but only 55 tribal CSE programs. Figures in **Appendix C** suggest that the 55 tribal CSE programs cover about 41%-46% of the total population of tribal members (as variously estimated). Some observers contend it is likely that gaps in the provision of CSE services to Native American children will remain a significant problem for many more years. They question whether the needs of the universe of Native American children can be met through the current configuration of tribal CSE programs. Others assert that tribal CSE programs are still in their early stages, that it is too soon to judge their effectiveness, and that the eventual universe of tribal CSE programs is not yet knowable.<sup>158</sup>

---

<sup>158</sup> According to OCSE data, the 12 comprehensive tribal CSE programs operating in FY2007 could have potentially served about 600,000 tribal members, of whom approximately 135,000 were children under the age of majority. (Source: OCSE Training Courses For Tribal IV-D Programs, Module 1C: How is it Working? [http://www.acf.hhs.gov/programs/cse/resources/tribal/training/text/orientation/orientation\\_mod1\\_less3\\_1.html](http://www.acf.hhs.gov/programs/cse/resources/tribal/training/text/orientation/orientation_mod1_less3_1.html).) The 600,000 figure represents roughly 27% of the U.S. Native American population. In FY2008-FY2010, an additional 26 tribal CSE programs became comprehensive tribal CSE programs. Although most of these additional programs were operated by tribes with relatively small populations, comparable data related to the potential client pool are not available.

## Appendix A. Tribal CSE Program Indicators

This appendix includes six tables that arrange each tribe according to its ranking on several CSE program features or indicators. The data shown in all six tables are for FY2010. The tables only include information on tribes with comprehensive CSE programs. If the data are not available, it is so indicated. (All of the tribes for which data are not available are tribes which began operating “comprehensive” tribal CSE programs during the period FY2008-FY2010.)

The Appendix A tables highlight some important aspects of tribal CSE programs, but they do not capture the complexity of individual programs. A simple ranking of the tribal programs does not indicate a program’s effectiveness. For example, one would expect programs with larger caseloads to have more child support collections (than other programs, all things being equal). Similarly, one would expect programs with larger caseloads to have higher program expenditures (than other programs, all things being equal). However, it may be less apparent that programs with smaller caseloads could have higher collections based on a tribe’s access to casino profits and/or valuable mineral rights. Also, programs with smaller caseloads may have high program expenditures because a higher proportion of tribal members need paternity establishment services. Thus, broad generalizations about the data shown in the tables may prove to be inaccurate.

**Table A-1** shows the amount of child support collected by each tribe. CSE administrators indicate that tribal CSE program collections data may provide an inaccurate picture of how well some tribes are doing because some collections obtained by tribes are distributed to the states and are thereby not reflected in the data shown in the table. **Table A-2** shows the amount of CSE expenditures for each of the tribes. **Table A-3** presents CSE caseload data. **Table A-4** displays the number of paternities established by each tribe. **Table A-5** displays the number of child support orders established by each tribe. **Table A-6** shows CSE collections per dollar of expenditures for each of the tribes. (The data in this appendix are from the Office of Child Support Enforcement, FY2010 Preliminary Report. The report can be found at [http://www.acf.hhs.gov/programs/cse/pubs/2011/reports/preliminary\\_report\\_fy2010/](http://www.acf.hhs.gov/programs/cse/pubs/2011/reports/preliminary_report_fy2010/))

**Notes:** NA—not available. Note that the tribes for which the data were not available were tribes with comprehensive tribal CSE programs that were approved in FY2008, FY2009, or FY2010.

## Appendix B. Comprehensive and Start-Up Tribal CSE Programs

This appendix includes two tables. **Table B-1** displays the 38 comprehensive tribal CSE programs, arranged by the year in which they became comprehensive. A tribal program is considered comprehensive if it has all of the 14 program components stipulated in the federal tribal CSE regulations. **Table B-2** shows the 17 start-up tribal CSE programs.<sup>159</sup> A start-up tribal CSE program does not have to have all of the required program components.

In FY2002 through FY2006, there were nine tribes or tribal organizations that had comprehensive CSE programs. In FY2007, 12 tribes or tribal organizations had comprehensive CSE programs. In FY2008, 20 additional tribes or tribal organizations (for a total 32) were operating comprehensive CSE programs. In FY2009, four additional tribes or tribal organizations (for a total 36) were operating comprehensive CSE programs. In FY2010, two additional tribes or tribal organizations (for a total 38) were operating comprehensive CSE programs.

**Table B-1. Comprehensive Tribal Child Support Enforcement Programs, September 2010**

<b>Nine tribes were comprehensive in FY2002 through FY2006:</b>
Chickasaw Nation
Forest County Potawatomi
Lac du Flambeau
Lummi Nation
Menominee
Navajo Nation
Port Gamble S'Klallam
Puyallup
Sisseton Wahpeton
<b>Three tribes became comprehensive in FY2007:</b>
Cherokee Nation
Osage Nation
Tlingit and Haida
<b>Twenty tribes became comprehensive in FY2008:</b>
Comanche Nation
Kaw Nation
Keweenaw Bay
Kickapoo

<sup>159</sup> The information in this table was taken from the following HHS website that lists the Tribal CSE programs on August 2, 2012—<https://ocse.acf.hhs.gov/int/directories/index.cfm?fuseaction=main.tribalivd>.

## Appendix C. American Indian and Alaska Native Population Figures for Tribes with CSE Programs

**Table C-1** shows four population figures for each of the 55 tribal CSE programs. For a discussion of the problems in determining tribal populations, see the “Data” section, above.

The second and third columns are based on the 2005 Indian Population and Labor Force Report. According to correspondence from the Department of Interior, the Department of the Interior will not release the 2010 Indian Population and Labor Force Report because of methodology inconsistencies.<sup>160</sup> The fourth and fifth columns are based on information from the decennial census, from the 2010 census if available, otherwise from the 2000 census and the 2010 census. With regard to the Census AIAN population data (columns 4 and 5), the bolded data are from the 2010 census and the unbolded data are from the 2000 census. The total for all tribes nationwide are from the 2010 census data.

**Table C-1. Population Figures for Tribes with Tribal CSE Programs: Tribal Enrollment (2005), BIA Service Population (2005), and Census AIAN Populations in Census-Defined Federal AIAN Areas (2010)**

CSE Tribes	Tribal Enrollment (Nationwide) (2005)	BIA Service Population <sup>a</sup> (On or Near Reservation) (2005)	Census AIAN Population Living in Census-Defined Federal AIAN Areas <sup>b</sup> (2010)	
			AIAN Alone	AIAN Alone or in Combination with Other Race(s)
